SECTION-I

PLAN OF EXAMINATION:

1. The Combined Competitive Examination comprises two successive stages:
   (i) The Manipur Civil Services Combined Competitive Preliminary Examination (Objective Type) for the Selection of candidates for Main Examination; and
   (ii) The Combined Competitive Main Examination (Written and Interview) for the selection of the candidates for the various services & posts for which examination is conducted.

2. The Manipur Civil Services Combined Competitive Preliminary Examination will consist of 1 (one) paper of objective type (multiple choice questions) and carry a maximum of 300 marks in General Studies only, for which the syllabus is mentioned in sub-section (A) of Section-II. This Examination is meant to serve as a screening test only; the marks obtained in the Preliminary Examination by the candidates who are declared qualified for admission to the Main Examination will not be counted for determining their final order of merit. The number of candidates to be admitted to the Main Examination will be 12-13 times the total approximate number of vacancies to be filled in the year in the various services and posts. Only those candidates who are declared by the Commission to have qualified in the Preliminary Examination in a year will be eligible for admission to the Main Examination of that particular year, provided they are otherwise eligible for admission to the Main Examination.

3. The Combined Competitive Main Examination will consist of Written Examination and Interview/Personality Test. The Written Examination will consist of 8(eight) compulsory papers of conventional essay type in the subjects set out in sub-section-(B) of Section-II. Also note (ii) under para-I of sub-section-(B) of Section-II may be seen.

4. Candidates who obtain such minimum qualifying marks in the written part of the Main Examination as may be fixed by the Commission at their discretion, shall be summoned by them for an interview for a personality test under sub-section-(C) of Section-II. However, the paper on General English will be of qualifying nature. Also see Note (ii) under Para-I of sub-Section-(B) of Section-II. The marks obtained in General English will not be counted for ranking. The number of candidates to be summoned for interview will be about twice the number of vacancies to be filled up. The interview will carry 200 marks (with no minimum qualifying marks).

   Marks thus obtained by the candidates in the Main Examination (Written part as well as Interview) would determine their final ranking. Candidates will be allotted to the various services/posts keeping in view their ranks in the Examination and the preferences expressed by them for the various services/posts.
SECTION – II

SCHEME AND SUBJECTS FOR THE PRELIMINARY AND MAIN EXAMINATIONS:

(A) COMBINED COMPETITIVE PRELIMINARY EXAMINATION:

The Manipur Civil Services Combined Competitive Preliminary Examination will be in Single Paper of objective type in the Subject “General Studies” (degree standard) of 3 (three) hours duration having 200 questions, with a maximum of 300 marks.

(B) COMBINED COMPETITIVE MAIN EXAMINATION (WRITTEN AND INTERVIEW):

1. The written examination will consist of the following papers:

<table>
<thead>
<tr>
<th>Paper-</th>
<th>Subject</th>
<th>Marks</th>
<th>Paper Type</th>
<th>Duration</th>
</tr>
</thead>
<tbody>
<tr>
<td>I</td>
<td>General English</td>
<td>300</td>
<td>One Paper</td>
<td>3 hrs.</td>
</tr>
<tr>
<td>II</td>
<td>Essay</td>
<td>300</td>
<td>One Paper</td>
<td>3 hrs.</td>
</tr>
<tr>
<td>III &amp; IV</td>
<td>General Studies</td>
<td>300</td>
<td>Two Papers</td>
<td>3 hrs. for each paper</td>
</tr>
<tr>
<td>V, VI, VII &amp; VIII</td>
<td>Any 2 subjects to be selected from the list of optional subjects set out in para 2 below. Each subject will have 2 papers.</td>
<td>300 for each paper</td>
<td>Four Papers</td>
<td>3 hrs. for each paper</td>
</tr>
</tbody>
</table>

Interview test will carry 200 marks.

Note:

(i) The paper on General English will be of Matriculation or equivalent standard and will be of qualifying nature. The marks obtained in the paper will not be counted for ranking.

(ii) The paper on Essay, General Studies and Optional Subjects of only such candidates will be evaluated as attained such minimum standard as may be fixed by the Commission in their discretion for the qualifying paper i.e. General English.
For the literature papers of the Languages, the scripts to be used by the candidates will be as under:

<table>
<thead>
<tr>

1. **List of Optional Subjects for Main Examination**:

1. Agriculture
3. Anthropology
4. Botany
5. Chemistry
6. Civil Engineering
7. Commerce & Accountancy
8. Computer Science
9. Economics
10. Education
11. Electrical Engineering
12. Geography
13. Geology
14. History
15. Law
16. Management
17. Mathematics
18. Mechanical Engineering
19. Medical Science
20. Philosophy
21. Physics
22. Political Science & International Relations
23. Psychology
24. Public Administration
25. Sociology
26. Statistics
27. Zoology
28. Literature of one of the following Languages: Manipuri, Hindi and English

**Note (i)**

Candidates will not be allowed to offer the following combination of subjects:

(a) Political Science and International Relations and Public Administration;
(b) Commerce & Accountancy and Management;
(c) Mathematics and Statistics;
(d) Anthropology and Sociology;
(e) Agriculture & Animal Husbandry and Veterinary Science;
(f) Management and Public Administration;
(g) Of the Engineering Subjects viz. Civil Engineering, Electrical Engineering and Mechanical Engineering – not more than one subject;
The question papers for the Main Examination will be of conventional (Essay) type.

Each paper will be of 3 (three) hours duration.

Question papers in all the subjects shall be answered in English except those in the literature or language in which the answer should be in the script concerned, as also mentioned in Note (iii) of Sub-Section B of Section-II above.

The details of the syllabi are set out in Section-III – Part-B.

**GENERAL INSTRUCTIONS:**

_(Preliminary as well as Main Examination)_

(i) Candidates must write the papers in their own hand. In no circumstances, will they be allowed the help of a scribe to write the answers for them.

(ii) The Commission have discretion to fix qualifying marks in any or all the subjects of the Examination.

(iii) Credit will be given for orderly, effective, and exact expression combined with due economy of words in all subjects of the examination.

(iv) In the question papers, whenever required, S.I. units will be used.

(v) Candidates should use only International Form of Indian numerals (i.e. 1, 2, 3,4,5,6 etc.) while answering question papers.

(vi) Marks will not be allotted for mere superficial knowledge.

(vii) Candidates are allowed to use battery operated pocket calculators for conventional (Essay) type papers only. No calculator is allowed for objective type papers. Loaning or interchanging of calculator in the examination hall is not permitted.

(vii) If the candidate’s handwriting is not easily legible, a deduction will be made on this account from the total marks otherwise accruing to him.

(C) **INTERVIEW TEST:**

The candidates will be interviewed by a Board who will have before them a record of his/her career. He/She will be asked questions on matters of general interest with specific stress on matters relating to Manipur. The objective of the Interview is to assess the personal suitability of the candidates for a career in public service by a Board of competent and unbiased observers. The test is intended to judge the mental
caliber of a candidate. In broad terms, this is really an assessment of not only his/her intellectual qualities but also social traits, his/her interest in current affairs, mental alertness, critical powers of assimilation, clear and logical exposition, balance of judgment, variety and depth of interest, ability of social cohesion and leadership, intellectual and moral integrity.

1. The technique of the interview is not that of a strict cross-examination but of a natural though directed and purposive conversation which is intended to reveal the mental qualities of the candidates.

2. The interview test is not intended to be a test either of the specialized or general knowledge of the candidates which has been already tested through their written papers. Candidates are expected to have taken an intelligent interest not only in their special subjects of academic study but also in the events which are happening around them both within and outside Manipur or the Country as well as in modern currents of thought and in new discoveries which should arouse the curiosity of well-educated youths.

SECTION III
SYLLABI FOR THE EXAMINATION
PART A - PRELIMINARY EXAMINATION
Compulsory Subject for Preliminary Examination
General Studies

General Science.
Current events of national and international importance
History of India and Indian National Movement
Indian and World Geography
Indian Polity and Economy
General Mental Ability
Questions on General Science will cover general appreciation and understanding of science including matters of everyday observation and experience, as may be expected of a well-educated person who has not made a special study of any particular scientific discipline. In current events, knowledge of significant national and international events will be tested. In History of India, emphasis will be on broad general understanding of the subject in its social, economic and political aspects. Questions on the Indian National Movement will relate to the nature and character of the nineteenth century resurgence, growth of nationalism and attainment of Independence. In Geography, emphasis will be on Geography of India. Questions on the Geography of India will relate to physical, social and economic Geography of the country, including the main features of Indian agricultural and natural resources. Questions on Indian Polity and Economy will test knowledge of the country’s political system and Constitution of India, Panchayati Raj, Social Systems and economic developments in India. On general mental ability, the candidates will be tested on reasoning and analytical abilities.
Part B
MAIN EXAMINATION

The Main Examination is intended to assess the overall intellectual traits and depth of understanding of candidates rather than merely the range of their information and memory.

The scope of the syllabus for the optional subject papers for the examination is broadly of the honours degree level i.e. a level higher than the bachelor's degree and lower than the master's degree. In the case of Engineering, Medical Science and Law, the level corresponds to the bachelor’s degree.

Compulsory Subjects for Main Examination
English – Compulsory (Main Examination)

The aim of the paper is to test the candidate’s ability to read and understand serious discursive prose, and to express his ideas clearly and correctly in English/Indian language concerned. The pattern of questions would be broadly as follows:-
(i) Comprehension of given passages.
(ii) Precise Writing
(iii) Usage and Vocabulary
   (iv) Short Essay
   (v)

Essay – Compulsory (Main Examination)

Candidates will be required to write an essay on a specific topic. The choice of subjects will be given. They will be expected to keep closely to the subject of the essay to arrange their ideas in orderly fashion, and to write concisely. Credit will be given for effective and exact expression.

General Studies – Compulsory (Main Examination)

The nature and standard of questions in these papers will be such that a well-educated person will be able to answer them without any specialized study. The questions will be such as to test a candidate’s general awareness of a variety of subjects, which will have relevance for a career in Civil Services.

Paper- I

(a) History of Modern India and Indian Culture
The History of Modern India will cover history of the Country from about the middle of nineteenth century and would also include questions on important personalities who shaped the Freedom Movement and Social reforms. The part relating to Indian Culture will cover all aspects of Indian Culture from the ancient to modern times.

(b) Geography of India
In this part, questions will be on the physical, economic and social geography of India.

(c) Indian Polity
This part will include questions on the Constitution of India, Political system and related matters.

(d) Current National issues and topics of social relevance
This part is intended to test the Candidate's awareness of current national issues and topics of social relevance in the present-day India, such as the following.
Demography & Human Resource & related issues. Behavioral & Social issues & Social Welfare problems, such as child labour, gender equality, adult literacy, rehabilitation of the handicapped and other deprived segments of the society, drug abuse, public health etc.
Law enforcement issues, human rights, corruption in public life, communal harmony etc.
Internal Security and related issues.
Environmental issues, ecological preservation, conservation of natural resources and national heritage.
The role of national institutions, their relevance and need for change.

Paper-II

(a) India and the World
This part is intended to test candidate's awareness of India's relationship with the world in various spheres, such as the following:-
Foreign Affairs
External Security and related matters
Nuclear Policy
Indians abroad
(b) Indian Economy
In this part, questions will be on the planning and economic development in India, economic & trade issues, Foreign Trade, the role and functions of I.M.F., World Bank, W.T.O. etc.
(c) International Affairs & Institutions
This part will include questions on important events in world affairs and on international institutions.
(d) Developments in the field of science & technology, communications and space
In this part, questions will test the candidate's awareness of the developments in the field of science & technology, communications and space and also basic ideas of computers.
(e) Statistical analysis, graphs and diagrams
This part will include exercises to test the candidate's ability to draw common sense conclusions from information presented in statistical, graphical or diagrammatical form and to point out deficiencies, limitations or inconsistencies therein.

Optional Subjects for Main Examination
Total number of questions in the question papers of optional subjects will be eight. All questions will carry equal marks. Each paper will be divided into two parts, viz. Part A and Part B, each Part containing four questions. Out of eight questions, five questions are to be attempted. One question in each Part will be compulsory. Candidates will be required to answer three more questions out of the remaining six questions, taking at least one question from each Part. In this way, at least two questions will be attempted from each Part i.e. one compulsory question plus one more.
Agriculture – Optional (Main Examination)

**Paper-I**

Ecology and its relevance to man, natural resources, their sustainable management and conservation. Physical and social environment as factors of crop distribution and production. Climatic elements as factors of crop growth, impact of changing environment on cropping pattern as indicators of environments. Environmental pollution and associated hazards to crops, animals, and humans.

Cropping pattern in different agro-climatic zones of the country. Impact of high-yielding and short-duration varieties on shifts in cropping pattern. Concepts of multiple cropping, multistory, relay and inter-cropping, and their importance in relation to food production. Package of practices for production of important cereals, pulses, oil seeds, fibres, sugar, commercial and fodder crops grown during Kharif and Rabi seasons in different regions of the country.

Important features, scope and propagation of various types of forestry plantations such as extension, social forestry, agro-forestry, and natural forests.

Weeds, their characteristics, dissemination and association with various crops; their multiplication; cultural, biological and chemical control of weeds.

Soil conservation planning on watershed basis. Erosion and run-off management in hilly, foot hills, and valley lands; processes and factors affecting them. Dry land agriculture and its problems. Technology of stabilizing agriculture production in rainfed agriculture area.

Farm management, scope, important and characteristics, farm planning. Optimum resources use and budgeting. Economics of different types of farming systems.

Marketing and pricing of agricultural inputs and outputs, price fluctuations and their cost; role of co-operatives in agricultural economy; types and systems of farming and factors affecting them.

Agricultural extension, its importance and role, methods of evaluation of extension programmes, socio-economic survey and status of big, small, and marginal farmers and landless agricultural labourers; farm mechanization and its role in agricultural production and rural employment. Training programmes for extension workers; lab-to-land programmes.

**Paper-II**

Cell Theory, cell structure, cell organelles and their function, cell division, nucleic acids-structure and function, gene structure and function. Laws of heredity, their significance in plant breeding. Chromosome structure, chromosomal aberrations, linkage and cross-over, and their significance in recombination breeding. Polyploidy, euploid and an euploids. Mutation-micro and macro-and their role in crop
Improvement. Variation, components of variation. Heritability, sterility and incompatibility, classification and their application in crop improvement. Cytoplasmic inheritance, sex-linked, sex-influenced and sex-limited characters.

Seed technology, its importance. Different kinds of seeds and their seed production and processing techniques. Role of public and private sectors in seed production, processing and marketing in India.

Physiology and its significance in agriculture. Imbibition, surface tension, diffusion and osmosis. Absorption and translocation of water, transpiration and water economy. Enzymes and plant pigments; photosynthesis-modern concepts and factors affecting the process, aerobic and nonaerobic respiration; C, C and CAM mechanisms. Carbohydrate, protein and fat metabolism.

Growth and development; photoperiodism and vernalization. Auxins, hormones, and other plant regulators and their mechanism of action and importance in agriculture. Physiology of seed development and germination; dormancy.

Climatic requirements and cultivation of major fruits, plants, vegetable crops and flower plants; the package of practices and their scientific basis. Handling and marketing problems of fruit and vegetables. Principal methods of preservation of important fruits and vegetable products, processing techniques and equipment. Role of fruits and vegetables in human nutrition. Raising of ornamental plants, and design and layout of lawns and gardens.

Storage pests and diseases of cereals and pulses, and their control.

Food production and consumption trends in India. National and international food policies. Production, procurement, distribution and processing constraints. Relation of food production to national dietary pattern, major deficiencies of calorie and protein.

Animal Husbandry and Veterinary Science – Optional (Main Examination)

Paper-I

1.2. Minerals in animal diet: Sources, functions, requirements and their relationship of the basic minerals nutrients including trace elements.
1.3. Vitamins, Hormones and Growth Stimulating, substances: Sources, functions, requirements and inter-relationship with minerals.

1.5 Advances in Non-Ruminant Nutrition-Poultry-Nutrients and their metabolism with reference to poultry, meat and egg production, Nutrients requirements and feed formulation and broilers at different ages.

1.6 Advances in Non-Ruminant Nutrition-Swine-Nutrients and their metabolism with special reference to growth and quality of meat production, Nutrient requirement and feed formulation for baby-growing and finishing pigs.

2. Animal Physiology

2.1 Growth and Animal Production :-Prenatal and postnatal growth, maturation, growth curves, measures of growth, factors affecting growth, conformation, body composition, meat quality.

2.2 Milk Production and Reproduction and Digestion: Current status of hormonal control of mammary development, milk secretion and milk ejection. Male and Female reproduction organ, their components and function. Digestive organs and their functions.

2.3 Environmental Physiology : Physiological relations and their regulation; mechanisms of adaption, environmental factors and regulatory mechanism involved in animal behavior, methods of controlling climatic stress.

3. Livestock Production and Management: 3.1 Commercial Dairy Farming-Comparison of dairy farming in India with advanced countries. Dairying under fixed farming and as a specialized farming, economic dairy farming, Starting of a dairy farm. Capital and land requirement, organization of the dairy farm.

Procurement of goods; opportunities in dairy farming, factors determining the efficiency of dairy animal, Herd recording, budgeting, cost of milk production; pricing policy; Personnel Management. Developing Practical and Economic ration for dairy cattle; supply of greens throughout the year, field and fodder requirements of Dairy Farm, Feeding regimes for day and young stock and bulls, heifers and breeding animals, new trends in feeding young and adult stock; Feeding records.

3.3. Feeding and management of animals under drought, flood and other natural calamities.

4. Genetics and Animal Breeding: Mitosis and Meiosis; Mendelian inheritance; deviations to Mendelian genetics; Expression of genes; Linkage and crossing over;
Sex determination, sex influenced and sex limited characters; Blood groups and polymorphism; Chromosome aberrations; Gene and its structure; DNA as a genetic material; Genetic code and protein synthesis; Recombinant DNA technology, Mutations, types of mutations, methods for detecting mutations and mutation rate.

4.1 Population Genetics Applied to Animal Breeding: Quantitative Vs. qualitative traits; Hardy Weinberg Law; Population Vs. individual; Gene and genotypic frequency; Forces changing gene frequency; Random drift and small populations; Theory of path coefficient; Inbreeding, methods of estimating inbreeding coefficient, systems of inbreeding; Effective population size; Breeding value, estimation of breeding value, dominance and epistatic deviation; partitioning of variation; Genotype X environment correlation and genotype X environment interaction; Role of multiple measurements; Resemblance between relatives.

4.2 Breeding Systems: Heritability, repeatability and genetic and phenotypic correlations, their methods of estimation and precision of estimates; Aids to selection and their relative merits; Individual, pedigree, family and within family selection; Progeny testing; Methods of selection; Construction of selection indices and their uses; Comparative evaluation of genetic gains through various selection methods; Indirect selection and Correlated response; Inbreeding, upgrading, cross-breeding and synthesis of breeds; Crossing of inbred lines for commercial production; Selection for general and specific combining ability; Breeding for threshold character.

Paper-II

1. Health and Hygiene

1.1 Histology and Histological Techniques: Stains-Chemical classification of stains used in biological work-principles of staining tissues-mordants-progressive & regressive stains-differential staining of cytoplasmic and connective tissue elements-Methods of preparation and processing of tissues-celloidin embedding-Freezing microtomy-Microscopy-Bright field microscope and electron microscope. Cytology-structure of cell, organelles & inclusions; cell division-cell types-Tissues and their classification-embryonic and adult tissues-Comparative histology of organs: -vascular, Nervous, Digestive, respiratory, musculo-skeletal and urogenital systems-Endocrine glands-Integuments-sense organs.

1.3 Bovine Anatomy-Regional Anatomy: Paranasal sinuses of OX-surface anatomy of salivary glands. Regional anatomy of infraorbital, maxillary, mandibuloalveolar, mental & coronal nerve block-Regional anatomy of paravertebral nerves, pudental nerve, median, ulnar & radial nerves-tibial, fibular and digital nerves-Cranial nerves-structures involved in epidural anesthesia-superficial lymph nodes-surface anatomy of visceral organs of thoracic, abdominal and pelvic cavities-comparative features of locomotor apparatus & their application in the biomechanics of mammalian body.

1.4 Anatomy of Fowls: Musculo-skeletal system-functional anatomy in relation to respiration and flying, digestion and egg production.

1.5 Physiology of blood and its circulation, respiration; excretion, Endocrine glands in health and disease.

1.5.1 Blood constituents: Properties and functions-blood cell formation-Hemoglobin synthesis and chemistry-plasma proteins production, classification and properties; coagulation of blood; Hemorrhagic disorders-anticoagulants-blood groups-Blood

1.5.2. **Circulation:** Physiology of heart, cardiac cycle-heart sounds, heartbeat, electrocardiograms, Work and efficiency of heart-effect of ions on heart function-metabolism of cardiac muscle, nervous and chemical regulation of heart, effect of temperature and stress on heart, blood pressure and hypertension, Osmotic regulation, arterial pulse, vasomotor regulation of circulation, shock. Coronary & pulmonary circulation, Blood-Brain barrier-Cerebrospinal fluid-circulation in birds.

1.5.3 **Respiration:** Mechanism of respiration, Transport and exchange of gases-neural control of respiration-chemoreceptors-hypoxia-respiration in birds.

1.5.4 **Excretion:** Structure and function of kidney-formation of urine methods of studying renal function-regulation of acid-base balance; physiological constituents of urine-renal failure-passive venous congestion-Urinary recreation in chicken-Sweat glands and their function. Biochemical tests for urinary dysfunction.

1.5.5 **Endocrine glands:** Functional disorders, their symptoms and diagnosis. Synthesis of hormones, mechanism and control of secretion-hormonal receptors-classification and function.

1.6. **General knowledge of pharmacology and therapeutics of drugs :** Cellular level of pharmacodynamics and pharmaco-kinetics-Drugs acting on fluids and electrolyte balance-drugs acting on Autonomic nervous system-Modern concepts of anesthesia and dissociative anesthetics-Autacoids-Antimicrobials and principles of chemotherapy in microbial injections-use of hormones in therapeutics-chemotherapy of parasitic infections-Drug and economic persons in the Edible tissues of animals-chemotherapy of Neoplastic diseases.

1.7. **Veterinary Hygiene with reference to water, air and habitation :** Assessment of pollution of water, air and soil-Importance of climate in animal health-effect of environment on animal function and performance-relationship between industrialization and animal agriculture-animal housing requirements for specific categories of domestic animals viz. pregnant cows & sows, milking cows, broiler birds-stress, strain & productivity in relation to animal habitation.

2. **Animal Diseases:**

2.1 Pathogenesis, symptoms, postmortem lesions, diagnosis, and control of infection diseases of cattle, pigs and poultry, horses, sheep and goats.

2.2 Etiology, symptoms, diagnosis, treatment of production diseases of cattle, pig and poultry.

2.3 Deficiency diseases of domestic animals and birds.

2.4 Diagnosis and treatment of nonspecific condition like impaction, Bloat, Diarrhea, Indigestion, dehydration, stroke, poisoning.

2.5 Diagnosis and treatment of neurological disorders.

2.6 Principles and methods of immunization of animals against specific diseases-hard immunity-disease free zones-‘zero’ disease concept-chemoprophylaxis.

2.7 Anesthesia-local, regional and general-preanaesthetic medication, Symptoms and surgical interference in fractures and dislocation, Hernia, choking, abomassal displacement-Caesarian operations, Rumenotomy-Castrations.

2.8 Disease investigation techniques-Materials for laboratory investigation-Establishment Animal Health Centres-Disease free zone.

3. **Veterinary Public Health**

3.1 **Zoonosis:** Classification, definition; role of animals and birds in prevalence and transmission of zoonotic diseases-occupational zoonotic diseases.
3.2. Epidemiology: Principles, definition of epidemiological terms, application of epidemiological measures in the study of diseases and disease control, Epidemiological features of air, water and food borne infections.

4. Milk and Milk Products Technology:
4.1 Milk Technology: Organization of rural milk procurement, collection and transport of raw milk. Quality, testing and grading raw milk, Quality storage grades of whole milk, Skimmed milk and cream. Processing, packaging, storing, distributing, marketing defects and their control and nutritive properties of the following milks: Pasteurized, standardized, toned, double toned, sterilized, homogenized, reconstituted, recombined and flavored milks. Preparation of cultured milks, cultures and their management, yoghurt, Dahi, Lassi and Srikhand. Preparation of flavored and sterilized milks. Legal standards, Sanitation requirement for clean and safe milk and for the milk plant equipment.

4.2 Milk Products Technology: Selection of raw materials, assembling, production, processing, storing, distributing and marketing milk products such as Butter, Ghee, Khoa, Channa, Cheese; Condensed, evaporated, dried milk and baby food; Ice cream and Kulfi; by products; whey products, butter milk, lactose and casein. Testing Grading, judging milk products-BIS and Agmark specifications, legal standards, quality control nutritive properties. Packaging, processing and operational control Costs.

5. Meat Hygiene and Technology:
5.1 Meat Hygiene:
5.1.1 Ante mortem care and management of food animals, stunning, slaughter and dressing operations; abattoir requirements and designs; Meat inspection procedures and judgment of carcass meat cuts-dressing of carcass meat cuts-duties and functions of Veterinarians in Wholesome meat production.

5.1.2 Hygienic methods of handling production of meat-spoilage of meat and control measures-Post slaughter physicochemical changes in meat and factors that influence them-quality improvement methods-Adulteration of meat and defection-Regulatory provisions in Meat trade and Industry.

5.2. Meat Technology
5.2.1 Physical and chemical characteristics of meat-meat emulsions-methods of preservation of meat-curing, canning, irradiation, packaging of meat and meat products; meat products and formulations.

5.3. Byproducts: Slaughter house by products and their utilization-Edible and inedible byproducts-social and economic implications of proper utilization of slaughter house byproducts-Organ products for food and pharmaceuticals.

**Anthropology – Optional (Main Examination)**

**Paper I**

1.1 Meaning and scope Anthropology
1.2 Relationship with other disciplines: History, Economics, Sociology, Psychology, Political Science, Life Science, Medical Science.
1.3 Main branches of Anthropology, their scope and relevance
   a) Social-cultural Anthropology
   b) Physical and biological Anthropology
   c) Archaeological Anthropology.
1.4 Human Evolution and emergence of Man.
**Organic Evolution**-Theories of evolution in historical perspective, pre-Darwinian, Darwinian and Post-Darwinian period. Modern synthetic theory of evolution; brief outline of terms and concepts of evolutionary biology (Doll's rule, Cope's rule, Gause's rule, parallelism, convergence, adaptive radiation, mosaic evolution); Principles of systematics and taxonomy, major primate taxa, tertiary and quaternary fossil primates, Systematics of Hominoidea and Hominidae, Origin and evolution of man-'*Homo erectus and Homo sapiens*'.
1.5 Phylogenetic status, characteristics and distribution of the following:
   a) Prepleistocene fossil primates-*Oreopithecus*.
   b) South and East African hominids-Plesianthropus/Australopithecus Africaus, Paranthropus, Australopithecus.
   c) *Paranthropus-Homo erectus-Homo erectus javanicus, Homo erectus pekinensis*.
   d) *Homo Heidelbergensis*.
   e) Neanderthal man-La-chapelle-aus-saints (Classical type), Mt. Carmelites types (Progressive type).
   f) Rhodesian man
   g) Homo sapiens-Cromognon, Grimaldi, Chancelede.
Recent advances in understanding the evolution, distribution and multidisciplinary approach to understand a fossil type in relation to others.
1.6 Evolutionary trend and classification of the order Primates, Relationship with other mammals, molecular evolution of Primates, Comparative anatomy of man and apes, primate locomotion; terrestrial and arboreal adaptation, skeletal changes due to erect posture and its implications.
1.7 Cultural Evolution-broad outlines of pre-historic cultures:
   a) Paleolithic
   b) Mesolithic
   c) Neolithic
   d) Chalcolithic
   e) Copper-Bronze age
   f) Iron age
2.1 Family-Definition and typology of family, household and domestic groups. Basic structure and functions; stability and changes in family. Typological and processual approaches to the study of family. Impact of urbanization, industrialization, education and feminist movements. Universality of family-a critique.
2.2 Concept of kinship: Definition of kin, incest prohibition exogamy and endogamy. Principles of descent-types and functions. Political and jural aspects of kinship.
Unilineal, bilateral and double descent. Descent, filiation and complementary filiation. Kinship terminology, typology and approaches to the study of terminology. Alliance and descent.

2.3 Marriage - Definition, types and variation of marriage systems. Debates on the universal definition of marriage. Regulation of marriage - preferential, prescriptive, proscriptive and open systems. Types and form of marriage - Dowry, bride-price, pestation and marriage stability.

3.1 Study of culture, patterns and processes. Concept of culture, patterns of culture, relationships between culture and civilization and society.

3.2 Concept of Social Change and Cultural Change:

3.4 Concept of Society.

3.5 Approaches to the study of culture and society - classical evolutionism, neo-evolutionism, culture ecology, historical particularism and diffusionism, structural-functionalism, culture and personality, transaction-alism, symbolism, cognitive approach and new ethnography, post structuralism and post-modernism.

5.2 Theoretical foundations. Types of political organisations-band, tribe, chiefdom, state, concept of power, authority and legitimacy. Social control, law and justice in tribal and peasant societies.

8.1 Concept, scope and major branches of human genetics. Its relationship with other branches of science and medicine.

8.2 Method for study of genetic principles in man-family study (pedegree analysis, twin study, foster child, co-twin method, cytogenetic method, chromosomal and karyotype
analysis), biochemical methods, immunological methods, D.N.A. technology and recombinant technologies.

8.3 Twin study method-zygosity, heritability estimates, present status of the twin study method and its applications.

8.4 Mendelian genetics in man-family study, single factor, multifactor, lethal, sub-lethal, and polygenic inheritance in man.

8.5 Concept of genetic polymorphism and selection, Mendelian population, Hardy-Weinberg law; causes and changes which bring down frequency-mutation, isolation, migration, selection, inbreeding and genetic drift. Consanguineous and non-consanguineous mating, genetic load, genetic effect of consanguineous and cousin marriages (statistical and probability methods for study of human genetics).

8.6 Chromosomes and chromosomal aberrations in man, methodology.

a) Numerical and structural aberrations (disorders)
b) Sex chromosomal aberrations-Klinefelter (XXY), Turner (XO), Super female (XXX), intersex, and other syndromic disorders.
c) Autosomal aberrations-Down syndrome, Patau, Edward and Cri-du-chat syndromes.
d) Genetic imprints in human disease, genetic screening, genetic counselling, human DNA profiling, gene mapping and genome study.

8.7 Concept of race in historical and biological perspective. Race and racism, biological basis of morphological variation of non-metric and metric characters. Racial criteria, racial traits in relation to heredity and environment; biological basis of racial classification, racial differentiation and race-crossing in man.

8.8 Ethnic groups of mankind-characteristics and distribution in world, racial classification of human groups. Principal living peoples of world. Their distribution and characteristics.

8.9 Age, sex and population variation in genetic marker-ABO, Rh blood groups, HLA, Hp, transferrin, Gm, blood enzymes. Physiological characteristics-Hb level, body fat, pulse rate, respiratory functions and sensory perceptions in different cultural and socio-economic groups. Impact of smoking air pollutions, alcoholism, drugs and occupational hazards on health.

10.1 Relevance in understanding of contemporary society. Dynamics of ethnicity at rural, tribal, urban and international levels. Etheric conflicts and political developments. Concept of ethnic boundaries. Ethnicity and concept of nation state.

11.1 Concept of human growth and development-stages of growth-prenatal, natal, infant, childhood, adolescence, maturity, senescence.

Factors affecting growth and development genetic, environmental, biochemical, nutritional, cultural and socio-economic.

12.2 Demographic theories-biological, social and cultural.

12.3 Demographic methods-census, registration system, sample methods, duel reporting system.
12.4 Population structures and population dynamics.
12.5 Demographic rates and ratios, life table-structure and utility.
12.6 Biological and socio-ecological factors influencing fecundity, fertility natality and mortality.
12.7 Methods of studying population growth.
12.8 Biological consequences of population control and family welfare.

13.1 Anthropology of sports
13.2 Nutritional Anthropology.
13.3 Anthropology in designing of defence and other equipment’s.
13.4 Forensic Anthropology.
13.5 Methods and principles of personal identification and reconstruction.
13.6 Applied human genetics-Paternity diagnosis genetic counselling and eugenics.
13.7 DNA technology-prevention and cure of diseases.
13.8 Anthropo-gentics in medicine
13.9 Serogenetics and cytogenetic in reproductive biology.
13.10 Application of statistical principles in human genetics and Physical Anthropology.

**PAPER II**

2. Demographic profile of India-Ethnic and linguistic elements in the Indian population and their distribution. Indian population, factors influencing its structure and growth.
4. Emergence, growth and development of anthropology in India-contributions of the 19th Century and early 20th Century scholar-administrators. Contributions of Indian anthropologists to tribal and caste studies. Contemporary nature of anthropological studies in India.
5. Approaches to the study of Indian society and culture-traditional and contemporary.
5.1 Aspects of Indian village-Social organisations of agriculture, impact of market economy on Indian villages.
5.2 Linguistic and religious minorities-social, political and economic status.
6. Tribal situation in India-biogenic variability, linguistic and socio-economic characteristics of the tribal populations and their distribution. Problems of the tribal Communities-land alienation, poverty indebtedness, low literacy, poor educational facilities, unemployment, underemployment, health and nutrition. Developmental projects-tribal displacement and problems of rehabilitation: Development of forest policy and tribal, Impact of urbanization and industrialization on tribal and rural populations.
8. Social change among the tribes during colonial and post-Independent India.
8.1 Impact of Hinduism, Christianity, Islam and other religious on tribal societies.
8.2 Tribe and nation state—a comparative study of tribal communities in India and other countries.
9. History of administration of tribal areas, tribal policies, plans, programmes of tribal development and their implementation. Role of N.G.Os.
9.1 Role of anthropology in tribal and rural development.
9.2 Contributions of anthropology to the understanding of regionalism, communalism and ethnic and political movements.

BOTANY – Optional (Main Examination)
PAPER-I

1. Microbiology and Plant Pathology: Viruses, bacteria, and plasmids—structure and reproduction. General account of infection, Phytoimmunology. Applications of microbiology in agriculture, industry, medicine and pollution control in air, soil and water.

Angiosperms: Systematics, anatomy, embryology, palynology and phylogeny.
Comparative account of various systems of Angiosperm Classification. Study of angiosperm families—Magnoliaceae, Ranunculaceae, Brassicaceae (Cruci-ferae), Rosaceae, Leguminosae, Euphorbiaceae, Malvaceae, Dipterocarpaceae, Apiaceae (Umbelliferae), Asclepiadaceae, Verbenaceae, Solana-ceae, Rubiaceae, Cucurbitaceae, Asteraceae (Composite), Poaceae (Gramineae), Arecaceae (Palmae), Liliaceae, Musaceae, Orchidaceae.
4. Plant Utility and Exploitation:
Origin of cultivated plants, Vavilov's centres of origin. Plants as sources for food, fodder, fibres, spices, beverages, drugs, narcotics, insecticides, timber, gums, resins and dyes.

PAPER-II

CHEMISTRY – Optional (Main Examination)
PAPER-I

1. Atomic structure
Quantum theory, Heisenberg's uncertainty principle, Schrodinger wave equation (time independent). Interpretation of wave function, particle in one-dimensional box, quantum numbers, hydrogen atom wave functions. Shapes of s, p and d orbitals.

2. Chemical bonding
Ionic bond, characteristics of ionic compounds, factors affecting stability of ionic compounds, lattice energy, Born-Haber cycle; covalent bond and its general characteristics, polarities of bonds in molecules and their dipole moments. Valence bond theory, concept of resonance and resonance energy. Molecular orbital theory (LCAO method); bonding in homonuclear molecules: H2+, H2 to Ne2, NO, CO, HF, CN, CN–, BeH2 and CO2. Comparison of valence bond and molecular orbital theories, bond order, bond strength and bond length.

3. Solid State

4. The gaseous state
Equation of state for real gases, intermolecular interactions, liquefaction of gases and critical phenomena, Maxwell's distribution of speeds, intermolecular collisions, collisions on the wall and effusion.

5. Thermodynamics and statistical thermodynamics
Thermodynamic systems, states and processes, work, heat and internal energy; first law of thermodynamics, work done on the systems and heat absorbed in different types of processes; calorimetry, energy and enthalpy changes in various processes and their temperature dependence. Second law of thermodynamics; entropy as a state function, entropy changes in various process, entropy–reversibility and irreversibility, Free energy functions; criteria for equilibrium, relation between equilibrium constant and thermodynamic quantities; Nernst heat theorem and third law of thermodynamics. Micro and macro states; canonical ensemble and canonical partition function; electronic, rotational and vibrational partition functions and thermodynamic quantities; chemical equilibrium in ideal gas reactions.

6. Phase equilibria and solutions
Phase equilibria in pure substances; Clausius-Clapeyron equation; phase diagram for a pure substance; phase equilibria in binary systems, partially miscible liquids–upper and lower critical solution temperatures; partial molar quantities, their significance and determination; excess thermodynamic functions and their determination.

7. Electrochemistry
Debye-Huckel theory of strong electrolytes and Debye-Huckel limiting Law for various equilibrium and transport properties. Galvanic cells, concentration cells; electrochemical series, measurement of e.m.f. of cells and its applications fuel cells and batteries.
Processes at electrodes; double layer at the interface; rate of charge transfer, current density; overpotential; electro analytical techniques—voltameter, polarography, ampero-metry, cyclic-voltametry, ion selective electrodes and their use.

8. Chemical kinetics
Concentration dependence of rate of reaction; differential and integral rate equations for zeroth, first, second and fractional order reactions. Rate equations involving reverse, parallel, consecutive and chain reactions; effect of temperature and pressure on rate constant. Study of fast reactions by stop-flow and relaxation methods. Collisions and transition state theories.

9. Photochemistry
Absorption of light; decay of excited state by different routes; photochemical reactions between hydrogen and halogens and their quantum yields.

10. Surface phenomena and catalysis
Absorption from gases and solutions on solid adsorbents, adsorption isotherms,—Langmuir and B.E.T. isotherms; determination of surface area, characteristics and mechanism of reaction on heterogeneous catalysts.

11. Bio-inorganic chemistry
Metal ions in biological systems and their role in ion-transport across the membranes (molecular mechanism), ionophores, photosynthesis—PSI, PSII; nitrogen fixation, oxygen-uptake proteins, cytochromes and ferredoxins.

12. Coordination chemistry
(a) Electronic configurations; introduction to theories of bonding in transition metal complexes. Valence bond theory, crystal field theory and its modifications; applications of theories in the explanation of magnetism and electronic spectra of metal complexes.
(b) Isomerism in coordination compounds. IUPAC nomenclature of coordination compounds; stereochemistry of complexes with 4 and 6 coordination numbers; chelate effect and polynuclear complexes; trans effect and its theories; kinetics of substitution reactions in square-planer complexes; thermodynamic and kinetic stability of complexes.
(c) Synthesis and structures of metal carbonyls; carboxylate anions, carbonyl hydrides and metal nitrosyl compounds.
(d) Complexes with aromatic systems, synthesis, structure and bonding in metal olefin complexes, alkyne complexes and cyclopentadienyl complexes; coordinative unsaturation, oxidative addition reactions, insertion reactions, fluxional molecules and their characterization. Compounds with metal-metal bonds and metal atom clusters.

13. General chemistry of ‘f’ block elements
Lanthanides and actinides; separation, oxidation states, magnetic and spectral properties; lanthanide contraction.

14. Non-Aqueous Solvents
Reactions in liquid NH3, HF, SO2 and H2 SO4. Failure of solvent system concept, coordination model of non-aqueous solvents. Some highly acidic media, fluorosulphuric acid and super acids.

Paper-II
1. Delocalised covalent bonding: Aromaticity, anti-aromaticity; annulenes, azulenes, tropolones, kekulene, fulvenes, sydrones.
2(a) Reaction mechanisms: General methods (both kinetic and non-kinetic) of study of mechanism or organic reactions illustrated by examples—use of isotopes, cross-over experiment, intermediate trapping, stereochemistry; energy diagrams of simple
organic reactions—transition states and intermediates; energy of activation; thermodynamic control and kinetic control of reactions.

(b) **Reactive intermediates:** Generation, geometry, stability and reactions of carbonium and carbonium ions, carbanions, free radicals, carbenes, benzynes and niternes.

(c) **Substitution reactions:** SN1, SN2, SNi, SN1', SN2', SNi' and SRN1 mechanisms; neighboring group participation; electrophilic and nucleophilic reactions of aromatic compound including simple heterocyclic compounds—pyrrole, furan thiophene, indole.

(d) **Elimination reactions:** E1, E2 and E1cb mechanism; orientation in E2 reactions—Saytzeff and Hoffmann; pyrolytic syn elimination—acetate pyrolysis, Chugaev and Cope eliminations.

(e) **Addition reactions:** - Electrophilic addition to C=C and C≡C; nucleophilic addition to C=O, C≡N, conjugated olefins and carbylons.

(f) **Rearrangements:** Pinacol-pinacolone, Hoffmann, Beckmann, Baeyer–Villiger, Favorskii, Fries, Claisen, Cope, Stevens and Wagner–Meerwein rearrangements.

3. **Pericyclic reactions:** Classification and examples; Woodward–Hoffmann rules—electrocyclic reactions, cycloaddition reactions [2+2 and 4+2] and sigmatropic shifts [1, 3; 3, 3 and 1, 5] FMO approach.

4. **Chemistry and mechanism of reactions:** Aldol condensation (including directed aldol condensation), Claisen condensation, Dieckmann, Perkin, Knoevenagel, Witting, Clemmensen, Wolff-Kishner, Cannizzaro and von Richter reactions; Stobbe, benzoin and acyloin condensations; Fischer indole synthesis, Skraup synthesis, Bischler-Napieralski, Sandmeyer, Reimer-Tiemann and Reformatsky reactions.

5. **Polymeric Systems**

(a) **Physical chemistry of polymers:** Polymer solutions and their thermodynamic properties; number and weight average molecular weights of polymers. Determination of molecular weights by sedimentation, light scattering, osmotic pressure, viscosity, end group analysis methods.

(b) **Preparation and properties of polymers:** Organic polymers—polyethylene, polystyrene, polyvinyl chloride, Teflon, nylon, terylene, synthetic and natural rubber. Inorganic polymers—phosphonitrilic halides, borazines, silicones and silicates.

(c) **Biopolymers:** Basic bonding in proteins, DNA and RNA.

6. **Synthetic uses of reagents:** OsO₄, HIO₄, CrO₃, Pb(OAc)₄, SeO₂, NBS, B₂H₆, Na-Liquid NH₃, LiAIH₄ NaBH₄ n-BuLi, MCPBA.

7. **Photochemist:** Photochemical reactions of simple organic compounds, excited and ground states, singlet and triplet states, Norrish-Type I and Type II reactions.

8. **Principles of spectroscopy and applications in structure elucidation**

(a) **Rotational spectra**—diatomic molecules; isotopic substitution and rotational constants.

(b) **Vibrational spectra**—diatomic molecules, linear triatomic molecules, specific frequencies of functional groups in polyatomic molecules.

(c) **Electronic spectra:** Singlet and triplet states. N→π* and π→π* transitions; application to conjugated double bonds and conjugated carbylons—Woodward-Fieser rules.

(d) **Nuclear magnetic resonance:** Isochronous and anisochronous protons; chemical shift and coupling constants; Application of H1 NMR to simple organic molecules.

(e) **Mass spectra:** Parent peak, base peak, daughter peak, metastable peak, fragmentation of simple organic cleavage, McLafferty rearrangement. Molecules;

(f) **Electron spin resonance:** Inorganic complexes and free radicals.
Civil Engineering – Optional (Main Examination)

Paper-I

Part-A

Engineering Mechanics:
Units and Dimensions, SI Units, Vectors, Concept of Force, Concept of particle and rigid body. Concurrent, Non Concurrent and parallel forces in a plane, moment of force and Varignon’s theorem, free body diagram, conditions of equilibrium, Principle of virtual work, equivalent force system. First and Second Moment of area, Mass moment of Inertia. Static Friction, Inclined Plane and bearings.

Kinematics and Kinetics:

Strength of Materials:

Structural Analysis:

Part-B

Design of Structures: Steel, Concrete and Masonry Structures.

Structural Steel Design:
Structural Steel: Factors of safety and load factors. Rivetted, bolted and welded joints and connections. Design of tension and compression member, beams of built up...
section, rivetted and welded plate girders, gantry girders, stancheons with battens and lacings, slab and gusseted column bases.

Design of highway and railway bridges: Through and deck type plate girder, Warren girder, Pratt truss.

**Design of Concrete and Masonry Structures:**
Concept of mix design. Reinforced Concrete: Working Stress and Limit State method of design—Recommendations of I.S. codes Design of one way and two way slabs, stair-case slabs, simple and continuous beams of rectangular, T and L sections. Compression members under direct load with or without eccentricity, isolated and combined footings.

Cantilever and Counterfort type retaining walls.

Water tanks: Design requirements for Rectangular and circular tanks resting on ground.

Prestressed concrete: Methods and systems of prestressing, anchorages, Analysis and design of sections for flexure based on working stress, loss of prestress.

Design of brick masonry as per I.S. Codes

Design of masonry retaining walls.

**Part-C**

**Fluid Mechanics, Open Channel Flow and Hydraulic Machines**

**Fluid Mechanics:** Fluid properties and their role in fluid motion, fluid statics including forces acting on plane and curve surfaces.

Kinematics and Dynamics of Fluid flow: Velocity and accelerations, stream lines, equation of continuity, irrotational and rotational flow, velocity potential and stream functions, flownet, methods of drawing flownet, sources and sinks, flow separation, free and forced vortices.

Control volume equation, continuity, momentum, energy and moment of momentum equations from control volume equation, Navier-Stokes equation, Euler’s equation of motion, application to fluid flow problems, pipe flow, plane, curved, stationary and moving vanes, sluice gates, weirs, orifice meters and Venturi meters.

**Dimensional Analysis and Similitude:** Buckingham’s Pi-theorem, dimensionless parameters, similitude theory, model laws, undistorted and distorted models.

**Laminar Flow:** Laminar flow between parallel, stationary and moving plates, flow through tube.

**Boundary layer:** Laminar and turbulent boundary layer on a flat plate, laminar sublayer, smooth and rough boundaries, drag and lift.

Turbulent flow through pipes: Characteristics of turbulent flow, velocity distribution and variation of pipe friction factor, hydraulic grade line and total energy line, siphons, expansion and contractions in pipes, pipe networks, water hammer in pipes and surge tanks.

**Open channel flow:** Uniform and non-uniform flows, momentum and energy correction factors, specific energy and specific force, critical depth, resistance equations and variation of roughness coefficient, rapidly varied flow, flow in contractions, flow at sudden drop, hydraulic jump and its applications surges and waves, gradually varied flow, classification of surface profiles, control section, step method of integration of varied flow equation, moving surges and hydraulic bore.

**Hydraulic Machines and Hydropower:**
Centrifugal pumps—Types, characteristics, Net Positive Suction Height (NPSH), specific speed. Pumps in parallel.

Reciprocating pumps, Air vessels, Hydraulic ram, efficiency parameters, Rotary and positive displacement pumps, diaphragm and jet pumps.
Hydraulic turbines, types classification, Choice of turbines, performance parameters, controls, characteristics, specific speed.

**Part-D**

**Geo Technical Engineering**
Types of soil, phase relationships, consistency limits particles size distribution, classifications of soil, structure and clay mineralogy.
Capillary water and structural water, effectives trees and pore water pressure, Darcy’s Law, factors affecting permeability, determination of permeability, permeability of stratified soil deposits.
Seepage pressure, quick sand condition, compressibility and consolidation, Terzaghi’s theory of one dimensional consolidation, consolidation test.
Compaction of soil, field control of compaction. Total stress and effective stress parameters, pore pressure coefficients.
Shear strength of soils, Mohr Coulomb failure theory, Shear tests.
Earth pressure at rest, active and passive pressures, Rankine’s theory, Coulomb’s wedge theory, earth pressure on retaining wall, sheet pile walls, Braced excavation. Bearing capacity, Terzaghi and other important theories, net and gross bearing pressure.
Immediate and consolidation settlement.
Stability of slope, Total Stress and Effective Stress methods, Conventional methods of slices, stability number.
Subsurface exploration, methods of boring, sampling, penetration tests, pressure meter tests.
Essential features of foundation, types of foundation, design criteria, choice of type of foundation, stress distribution in soils, Bossiness’s theory, Newmarks’s chart, pressure bulb, contact pressure, applicability of different bearing capacity theories, evaluation of bearing capacity from field tests, allowable bearing capacity, Settlement analysis, allowable settlement.
Proportioning of footing, isolated and combined footings, rafts, buoyancy rafts, Pile foundation, types of piles, pile capacity, static and dynamic analysis, design of pile groups, pile load test, settlement of piles, lateral capacity. Foundation for Bridges.
Ground improvement techniques– preloading, sand drains, stone column, grouting, and soil stabilisation.

**Paper-II**

**Part-A**

**Construction Technology, Equipment, Planning and Management**

1. **Construction Technology:**
   Engineering Materials:

   **Construction:**

Functional planning of building: Building orientation, circulation, grouping of areas, privacy concept and design of energy efficient building; provisions of National Building Code.

Building estimates and specifications; Cost of works; valuation.

2. Construction Equipment:
Standard and special types of equipment, Preventive maintenance and repair, factors affecting the selection of equipment, economical life, time and motion study, capital and maintenance cost.

Concreting equipments: Weigh batcher, mixer, vibration, batching plant, Concrete pump.

Earth-work equipment: Power shovel hoe, bulldozer, dumper, trailers, and tractors, rollers, sheep foot roller.

3. Construction Planning and Management: Construction activity, schedules, job layout, bar charts, organization of contracting firms, project control and supervision. Cost reduction measures.

Network analysis: CPM and PERT analysis, Float Times, cashing of activities, contraction of network for cost optimization, updating, Cost analysis and resource allocation.

Elements of Engineering Economics, methods of appraisal, present worth, annual cost, benefit-cost, incremental analysis. Economy of scale and size. Choosing between alternatives including levels of investments. Project profitability.

Part-B

Survey and Transportation Engineering

Railways : Permanent way, sleepers, rail fastenings, ballast, points and crossings, design of turn outs, stations and yards, turntables, signals, and interlocking, level-crossing. Construction and maintenance of permanent ways: Superelevation, creep of rail, ruling gradient, track resistance, tractive effort, relaying of track.

Drainage of roads: Surface and sub-surface drainage.

Traffic Engineering: Forecasting techniques, origin and destination survey, highway capacity. Channelized and unchannelised intersections, rotary design elements, markings, sign, signals, street lighting; Traffic surveys. Principle of highway financing.

Part-C

Hydrology, Water Resources and Engineering:
Hydrology: Hydrological cycle, precipitation, evaporation, transpiration, depression storage, infiltration, overland flow, hydrograph, flood frequency analysis, flood estimation, flood routing through a reservoir, channel flow routing-Muskingum method.
Ground water flow: Specific yield, storage coefficient, coefficient of permeability, confined and unconfined aquifers, aquifers, aquitards, radial flow into a well under confined and unconfined conditions, tube wells, pumping and recuperation tests, ground water potential.

Water Resources Engineering: Ground and surface water resource, single and multipurpose projects, storage capacity of reservoirs, reservoir losses, reservoir sedimentation, economics of water resources projects.

Irrigation Engineering: Water requirements of crops: consumptive use, quality of water for irrigation, duty and delta, irrigation methods and their efficiencies.

Canals: Distribution systems for canal irrigation, canal capacity, canal losses, alignment of main and distributory canals, most efficient section, lined canals, their design, regime theory, critical shear stress, bed load, local and suspended load transport, cost analysis of lined and unlied canals, drainage behind lining.

Water logging: causes and control, drainage system design, salinity.

Canal structures: Design of cross regulators, head regulators, canal falls, aqueducts, metering flumes and canal outlets.

Diversion head work: Principles and design of weirs of permeable and impermeable foundation, Khosla’s theory, energy dissipation, stilling basin, sediment excluders.

Storage works: Types of dams, design, principles of rigid gravity and earth dams, stability analysis, foundation treatment, joints and galleries, control of seepage.

Spillways: Spillway types, crest gates, energy dissipation.

River training: Objectives of river training, methods of river training.

Environmental Engineering

Water Supply: Estimation of surface and subsurface water resources, predicting demand for water, impurities, of water and their significance, physical, chemical and bacteriological analysis, waterborne diseases, standards for potable water.

Intake of water: pumping and gravity schemes. Water treatment: principles of coagulation, flocculation and sedimentation; slow-; rapid-, pressure-, filters; chlorination, softening, removal of taste, odour and salinity.

Water storage and distribution: storage and balancing reservoirs: types, location and capacity. Distribution system: layout, hydraulics of pipe lines, pipe fittings, valves including check and pressure reducing valves, meters, analysis of distribution systems, leak detection, maintenance of distribution systems, pumping stations and their operations.

Sewerage systems: Domestic and industrial wastes, storm sewage—separate and combined systems, flow through sewers, design of sewers, sewer appurtenances, manholes, inlets, junctions, siphon. Plumbing in public buildings.

Sewage characterization: BOD, COD, solids, dissolved oxygen, nitrogen and TOC. Standards of disposal in normal water course and on land.

Sewage treatment: Working principles, units, chambers, sedimentation tanks, trickling filters, oxidation ponds, activated sludge process, septic tank, disposal of sludge, recycling of waste water.

Solid waste: collection and disposal in rural and urban contexts, management of long-term ill-effects.

Accounting, Taxation & Auditing

Financial Accounting
Accounting as a financial information system; Impact of behavioural sciences.
Accounting Standards e.g., accounting for depreciation, inventories, gratuity, research and development costs, long term construction contracts, revenue recognition, fixed assets, contingencies, foreign exchange transactions, investments and government grants.
Advanced problems of company accounts.
Amalgamation absorption and reconstruction of companies.
Valuation of shares and goodwill.

Cost Accounting
Nature and functions of cost accounting.
Job Costing
Process Costing
Marginal Costing; Techniques of segregating semi-variable costs into fixed and variable costs.
Cost-volume-profit relationship; aid to decision making including pricing decisions, shutdown etc.
Techniques of cost control and cost reduction.
Budgetary control, flexible budgets.
Standard costing and variance analysis.
Responsibility accounting, investment, profit and Cost centres.

Taxation
Definitions
Basis of charge.
Incomes which do not form part of total income.
Simple problems of computation of income under various heads, i.e., salaries, income from house property, profits and gains from business or profession, capital gains, income of other persons included in assessee's total income.
Aggregation of income and set off/carry forward of loss.
Deductions to be made in computing total income.

Auditing
Audit of cash transactions, expenses, incomes, purchases, sales.
Valuation and verification of assets with special reference to fixed assets, stocks and debts.
Verification of liabilities.
Audit of limited companies; appointment, removal, powers, duties and liabilities of company auditor, significance of 'true and fair', MAOCARO report.
Auditor's report and qualifications therein.
Special points in the audit of different organisations like clubs, hospitals, colleges, charitable societies.

Part-II

Business Finance and Financial Institutions.
Financial Analysis as a Diagnostic Tool.
Management of Working Capital and its Components-Forecasting working capital needs, inventory, debtors, cash and credit management.
Investment Decisions-Nature and Scope of Capital Budgeting-Various types of decisions including Make or Buy and Lease or Buy-Techniques of Appraisal and their application-
Consideration of Risk and Uncertainty-Analysis of Non-financial Aspects.
Rate of Return on Investments-Required Rate of Return-its measurement-Cost of Capital-Weighted Average Cost-Different Weights.
Concepts of Valuation-Valuation of firm’s Fixed Income Securities and Common Stocks.
Dividend and Retention Policy-Residual Theory or Dividend Policy-Other Models-Actual Practices.
Raising finance-short term and long term. Bank finance-norms and conditions.
Financial Distress-Approaching BIFR under Sick Industrial Undertakings Act: Concept of Sickness, Potential Sickness, Cash Loss, Erosion of Networth.
Monetary and Credit policy of Reserve Bank of India.

**Paper-II**

**Organization Theory and Industrial Relations**

**Part-I**

**Organization Theory**

Nature and concept of Organisation-Organisation goals; Primary and secondary goals, Single and multiple goals, ends means chain-Displacement, succession, expansion and multiplication of goals-Formal organization; Type, Structure-Line and Staff, functional matrix, and project-Informal organization-functions and limitations.
Evolution of organization theory: Classical, Neo-classical and system approach-Bureaucracy; Nature and basis of power, sources of power, power structure and politics-Organizational behavior as a dynamic system: technical, social and power systems-interrelations and interactions-Perception-Status system. Theoretical and empirical foundation of theories and Models of motivation. Morale and productivity-Leadership: Theories and styles-Management of conflicts in organization-Transactional Analysis-Significance of culture to organizations. Limits of rationality-Organizational change, adaptation, growth and development, Professional management vs. family management, Organizational control and effectiveness.

**Part-II**

**Industrial Relations.**
Nature and scope of industrial relations, the socio-economic set-up, need for positive approach.
Theories of Unionism.
Trade Union movement in India-origin, growth and structure; Attitude and approach of management of India-recognition. Problems before Indian Trade Union movement.
Industrial disputes-sources; strikes and lockouts.
Compulsory adjudication and collective bargaining-approaches.
Worker's participation in management-philosophy, rationale; present day state of affairs and future prospects.
Prevention and settlement of industrial disputes in India.
Industrial relations in Public Enterprises.
Absenreism and labor turnover in Indian Industries-causes
Relative wages and wage differentials; wage policy.
Wage policy in India; the Bonus issue.
I.L.O. and India;
Role of Personnel Department in the Organization.

**COMPUTER SCIENCE**
**PAPER – I**
1. **Formal Languages and Automata Theory**
   Finite state machines, push down automata, Finite automata, context free language, context sensitive language, Turing machine, Decision question and undecided problems.
2. **Computer Organization**
   Functional components, CPU design, Memory organization and I/O organization.
3. **Operating Systems.**
   Process management, Memory management, File management I/O management.
4. **Software Engineering**
   Life cycle model, function oriented design, object oriented design, User interface design, coding and Testing, software requirement, project management, software reliability and Maintenance.

**COMPUTER SCIENCE**
**PAPER – II**
1. **Date Structures**
   Continuous and Non-continuous data structures, Dynamic storage allocations, File organization techniques.
2. **Principle of Programming Languages.**
   Various programming paradigms Syntax, Semantics, Block structure, Scooping, Binding, Object oriented programming, Functional programming, Logic and concurrent programming.
3. **Database Management**
   Concept, Data independence, Different models, Storage organization, query languages, Normal forms, Decomposition, Security, concurrency, Recovery.
4. **Data communication and computer Networks**
   Basics of digital communication, Network architecture, physical layer, Medium access protocols, Data-link layer, Network layer, Transport layer and Application layer.
Economics – Optional (Main Examination)

Paper-I

2. Functions of money—Measurement of price level changes—Money and real balances—Monetary standards—High-powered money and the Quantity theory of money, its variants and critiques thereof—Demand for and supply of money—The money multiplier—Theories of determination of interest rate—Interest and prices—Theories of inflation and control of inflation.

5. Public finance and its role in market economy in stabilization, supply stability, allocative efficiency, distribution and development. Sources of revenue—Forms of Taxes and subsidies, their incidence and effects; Limits to taxation, loans, crowding-out effects, and limits to borrowing. Types of budget deficits—Public expenditure and its effects.

6. International Economics
   (i) Old and New theories of International Trade.
      a) Comparative advantage, Terms of trade and offer curve.
      b) Product cycle and Strategic trade theories.
      c) "Trade as an engine of growth" and theories of underdevelopment in an open economy.
   (ii) Forms of protection.
   (iii) Balance of Payments Adjustments Alternative Approaches.
      a) Price versus income, income adjustments under fixed exchange rates.
      b) Theories of policy mix.
      c) Exchange rate adjustments under capital mobility.
      d) Floating Rates and their implications for developing countries; Currency Boards.
   (iv) (a) IMF and the World Bank.
      (b) W.T.O.
      (c) Trade Blocks and monetary unions.

7. Growth and development.
   (i) Theories of growth: Classical and neo-classical theories; The Harrod model; economic development under surplus Labour; wage-goods as a constraint on growth; relative importance of physical and human capitals in growth; innovations and development; Productivity, its growth and source of changes thereof. Factors determining savings to income ratio and the capital-out put ratio.
(ii) Main features of growth: Changes in Sectorial compositions of income; Changes in occupational distribution; changes in income distribution; changes in consumption levels and patterns; changes in savings and investment and in pattern of investment. Case for and against industrialization. Significance of agriculture in developing countries.

(iii) Relation between state, planning and growth, changing roles of market and plans in growth economic policy and growth.

(iv) Role of foreign capital and technology in growth. The significance of multi-nationals.

(v) Welfare indicators and measures of growth-Human development indices-The basic needs approach.

(vi) Concept of sustainable development; convergence of levels of living of developed and developing countries; meaning of self-reliance in growth and development.

**Paper-II**

IV. Industry: Industrial system of India: Trends in Composition and growth. Role of public and private sectors, Role of small and cottage industries. Indian industrial Strategy-Capital versus consumer goods, wage-goods versus luxuries, capital-intensive versus labor-intensive techniques, import-substituting versus export promotion. Sickness and high-cost Industrial policies and their effects. Recent moves for liberalization and their effects on Indian industry.

V. Money and banking: The monetary institutions of India: Factors determining demand for and supply of money. Sources of Reserve money-money multiplier-Techniques of money supply regulation under open economy. Functioning of money market in India. Budget deficit and money supply. Issues in Reform of Monetary and Banking Systems.

VI. Index numbers of price levels-Course of Price level in post-Independence period-sources and causes of inflation-role of monetary and supply factors in price level determination-policies towards control of inflation. Effects of inflation under open economy.

VII. Trade, balance of payments and exchange: Foreign trade of India; composition and direction shifts in trade policy from import substitution to export promotion. Impact of liberalization on pattern of trade. India's external Borrowings-the Debt problem.
Exchange rate of the rupee; Devaluations, depreciations and their effects on balance of payments-Gold imports and Gold policy-convertibility on current and capital accounts-rupee in an open economy. Integration of Indian economy with world economy-India and the WTO.

VIII. Public Finance and Fiscal Policy: Characteristics of and trends in India’s Public Finance-Role of Taxes, (direct and indirect) and subsidies-Fiscal and monetary deficits-public expenditures and their significance-Public Finance and Inflation-Limiting Government’s debt-Recent fiscal policies and their effects.

**Education – Optional (Main Examination)**

**PAPER - I**

**PART - I**

2. School and community — their relation, functions and responsibilities.
4. Freedom and discipline — Importance of freedom in education, Free-discipline, relation between freedom and discipline, Discipline meaning types and its importance, Reward and punishment.
6. Theories of play — play methods in education.
7. Education for National integration and international understanding.

**PART – II**

1. Psychology — is meaning, scope of definition, its importance in education, Methods of educational psychology.
2. Physical basis of mental life — Importance of sensation, perception and conception.
3. Adolescence — its significance and problems.
4. Emotions and instincts — their importance in education, Importance of needs, drives and motives.
5. Learning — its meaning and importance, laws of learning, efficiency in learning.
6. Image and imagination, its importance in education.
7. Memory — meaning and types of memory, cause of forgetting, attention and its relation to interest.
8. Intelligence — its meaning and nature.
9. Statistics in education — Calculation of mean, medium and mode, standard deviation and quartile deviation, Coefficient of correlation by rank, difference method.

**EDUCATION**

**PAPER - II**

3. Wood’s Despatch of 1854 – its impact on Indian education.
5. Lord Curzon’s educational policy – Primary, Secondary and University education.
8. Wardha Scheme of Education 1937, its implementation in India.
9. Universalization of Elementary Education (UEE) in Manipur under EGS & AIE and SSA.
10. Adult Education – Problems in the implementation of Adult Education Programme – Objectives and aims of NAEP (now AEP).

**Electrical Engineering – Optional (Main Examination)**

**Paper-I**

**Electrical Circuits – Theory and Applications**

- Circuit components; network graphs: KCL, KVL; circuit analysis methods: nodal analysis, mesh analysis; basic network theorems and applications; transient analysis: RL, RC and RLC circuits; sinusoidal steady state analysis; resonant circuits and applications; coupled circuits and applications; balanced 3-phase circuits. Two-port networks, driving point and transfer functions; poles and zeros of network functions. Elements of networks synthesis. Filter-theory: design and applications. Active filters. Circuit simulation: Input formats; methods of education formulation; solution of equations; output formats; SPICE.

**Signals & Systems**

- Representation of continuous–time and discrete-time signals & systems; LTI systems; convolution; impulse response; time-domain analysis of LTI systems based on convolution and differential/difference equations. Fourier transform, Laplace transform, Z-transform, Transfer function. Sampling and recovery of signals DFT, FFT Processing of analog signals through discrete-time systems.

**E.M. Theory**

**Analog Electronics**

**Digital Electronics**

- Boolean algebra; minimization of Boolean functions; logic gates; digital IC families (DTL, TTL, ECL, MOS, CMOS). Combinational circuits: arithmetic circuits, code converters, multiplexers and decoders. Sequential circuits: latches and flip-flops, counters and shift-registers. Comparators, timers, multivibrators. Sample and hold
circuits, ADCs and DACs. Semiconductor memories. Logic implementation using programmable devices (ROM, PLA, FPGA).

Energy Conversion
Principles of electromechanical energy conversion: Torque and emf in rotating machines. DC machines: characteristics and performance analysis; starting and speed control of motors.
Transformers: principles of operation and analysis; regulation, efficiency; 3-phase transformers. 3-phase induction machines and synchronous machines: characteristics and performance analysis; speed control. Special machines: Stepper motors, brushless dc motors, permanent magnet motors single-phase motors; FHP.

Power Electronics and Electric Drives:
Semiconductor power devices: diode, transistor, thyristor, triac, GTO and MOSFET—static characteristics and principles of operation; triggering circuits; phase control rectifiers; bridge converters: fully-controlled and half-controlled; principles of thyristor choppers and inverters; basic concepts of speed control of dc and ac motor drives applications of variable-speed drives.

Analog Communication
Random variables: continuous, discrete; probability, probability functions. Statistical averages; probability models; Random signals and noise: white noise, noise equivalent bandwidth; signal transmission with noise; signal to noise ratio. Linear CW modulation: Amplitude modulation: DSB, DSB-SC and SSB. Modulators and Demodulators: Phase and Frequency modulation: PM & FM signals; narrowband FM; generation & detection of FM and PM, Deemphasis, Preemphasis. CW modulation system: Superhetrodyne receivers, AM receivers, communication receivers, FM receivers, phase locked loop, SSB receiver

Signal to noise ratio calculation for AM and FM receivers.

Microwaves and Antenna
Electromagnetic radiation, Propagation of waves: ground waves, sky wave, space wave, tropospheric scatter propagation. Extraterrestrial communications. Antenna: Various types, gain, resistance, band-width, beam width and polarization, effect of ground. Antenna coupling; high frequency antennas; microwave antennas; special purpose antennas. Microwave Services: Klystron, magnetron, TWT, gun diodes, Impatt, Bipolar and FETs, Microwave integrated circuits. Microwave measurements.

Control Systems

Electrical Engineering Materials

Microprocessors and microcomputers
8-bit microprocessor: architecture, CPU, module design, memory interfacing, I/O, Peripheral controllers, Multiprocessing. IBM PC architecture: overview, introduction to DOS, Advanced microprocessors.

Measurement and Instrumentation
Error analysis; measurement of current voltage, power, energy, power-factor, resistance, inductance, capacitance and frequency; bridge measurement. Electronic measuring instruments: multimeter, CRO, digital voltmeter, frequency counter, Q-meter, spectrum-analyzer, distortion-meter. Transducers: thermocouple, thermistor, LVDT, strain-gauge, piezo-electric crystal. Use of transducers in measurements of non-electrical quantities. Data-acquisition systems.

IC Technology
Overview of IC Technology. Unit-steps used in IC fabrication: wafer cleaning, photolithography, wet and dry etching, oxidation, diffusion, ion-implantation, CVD and LPCVD techniques for deposition of poly-silicon, silicon, silicon-nitride and silicon dioxide; metallization and passivation.

Power Systems: Analysis and Control
Steady-state performance of overhead transmission lines and cables; principles of active and reactive power transfer and distribution; per-unit quantities; bus admittance and impedance matrices; load flow; voltage control and power factor correction; economic operation; symmetrical components, analysis of symmetrical and unsymmetrical faults. Concept of system stability: swing curves and equal area criterion. Static VAR system. Basic concepts of HVDC transmission; FACTS. Computer control and Automation: Introduction to energy control centres; various states of a power system; SCADA systems and RTUs. Active power control: Speed control of generators, tie-line control, frequency control. Economic dispatch.

Power system protection

Non-conventional Energy Sources and Energy Management

Digital Communication
Pulse code modulation (PCM), differential pulse code modulation (DPCM), delta modulation (DM), Digital modulation and demodulation schemes: amplitude, phase and frequency keying schemes (ASK, PSK, FSK). Error control coding: error detection and correction, linear block codes, convolution codes. Information measure and source coding. Data networks, 7-layer architecture.

Satellite Communication, Radar and TV

Fiber Optic System
Multiplexing: Time division multiplexing, Frequency Division multiplexing. Optical properties of materials: Refractive index absorption and emission of light, optical fibers, lasers and optoelectronic materials Fiber optic links.

Geography – Optional (Main Examination)
Paper-I
Principles of Geography
Section-A

Physical Geography
i) Geomorphology: Factors controlling landform development; endogenetic and exogenetic forces; origin and evolution of the earth’s crust; physical conditions of the earth’s interior; geosynclines; continental drift; isostasy; sea-floor spreading; plate tectonics; mountain building; volcanicity; earthquakes; concepts of geomorphic cycles; landforms associated with fluvial, arid, glacial, coastal and karst cycle; groundwater; Applied Geomorphology.
ii) Climatology: Temperature and pressure belts of the world; heat budget of the earth; atmospheric circulation; planetary and local winds; monsoons and jet streams; air masses and fronts; temperate and tropical cyclones; types and distribution of precipitation; Koppen’s and Thornthwaite’s classification of world climate; hydrological cycle; climatic change.
iii) Oceanography: Bottom topography of the Atlantic, Indian and Pacific Oceans; temperature and salinity of the oceans; ocean deposits; ocean currents and tides; marine resources—biotic, mineral and energy resources; coral reefs; sea-level changes.
iv) Biogeography: Genesis of soils; classification and distribution of soils; soil profile; soil erosion and conservation; factors influencing world distribution of plants and animals; problems of deforestation and conservation measures; social forestry, agro-forestry.
v) Environmental Geography: Human ecological adaptations; transformation of nature by man; environmental degradation and conservation; ecosystems and their management; global ecological imbalances—problems of pollution, global warming, reduction in bio-diversity and depletion of forests.

Section-B
Human Geography
i) Perspectives in Human Geography: A real differentiation; regional synthesis; dichotomy and dualism; environmentalism; quantitative revolution and locational analysis; radical, behavioral, human and welfare approaches; cultural regions of the world human and welfare approaches; cultural regions of the world; human development indicators.
ii) Economic Geography: World economic development—measurement and problems; world resources and their distribution; energy crisis; the limits to growth; world agriculture—typology of agricultural regions; agricultural inputs and productivity; food and nutrition problems; famine—causes, effects and remedies; world industries—location patterns and problems; patterns of world trade.
iii) Population and Settlement Geography: Growth and distribution of world population; demographic attributes; causes and consequences of migration; concepts of over—, under— and optimum population; world population problems. Types and patterns of rural settlements; hierarchy of urban settlements; concept of primate city and rank-size rule; functional classification of towns; sphere of urban influence; rural-urban fringe; satellite town; problems of urbanization.
iv) **Regional Planning**: Concept of a region; types of regions and methods of regionalization; growth centers and growth poles; regional imbalances; environmental issues in regional planning; planning for sustainable development.

v) **Models, Theories and Laws in Human Geography**: System analysis in Human Geography; Malthusian, Marxian and Demographic Transition models; Central Place theories of Christaller and Losch; Von Thunen’s model of agricultural location; Weber’s model of industrial location; Rostov’s model of stages of growth. Heart-land and Rimland theories; laws of international boundaries and frontiers.

**Note**: Candidates will be required to answer one compulsory map question pertinent to subjects covered by this paper.

---

### Paper-II

**Geography of India**

**Section-A.**

i) **Physical Setting**: Space relationship of India with neighboring countries; structure and relief; drainage system and watersheds; physiographic regions; mechanism of Indian monsoons; tropical cyclones and western disturbances; floods and droughts; climatic regions; natural vegetation, soil types and their distributions.

ii) **Resources**: Land, surface and groundwater, energy, minerals, and biotic resources, their distribution, utilization and conservation; energy crisis.

iii) **Agriculture**: Infrastructure—irrigation, seeds, fertilizers, power; institutional factors—land holdings, land tenure and land reforms; agricultural productivity, agricultural intensity, crop combination, land capability; agro-and social forestry; green revolution and its socio-economic and ecological implications; significance of dry farming; livestock resources and white revolution; blue revolution; agricultural regionalization; agro-climatic zones.

iv) **Industry**: Evolution of industries; locational factors of cotton, jute, iron and steel, fertilizer, paper, drugs and pharmaceutical, automobile and cottage industries; industrial complexes and industrial regionalization; new industrial policy; multinationals and liberalization.

v) **Transport, Communication and Trade**: Road, railway, waterway, airway and pipeline networks and their complementary roles in regional development; growing importance of ports on national and foreign trade, trade balance; free trade and export promotion zones; developments in communication technology and its impact on economy and society.

---

### Section-B

i) **Cultural Setting**: Racial and ethnic diversities; major tribes, tribal areas and their problems; role of language, religion and tradition in the formation of cultural regions; growth, distribution and density of population; demographic attributes—sex-ratio, age structure, literacy rate, work-force, dependency ratio and longevity; migration (inter-regional, intra-regional and international) and associated problems; population problems and policies.

ii) **Settlements**: Types, patterns and morphology of rural settlements; urban development; census definition of urban areas; morphology of Indian cities; functional classification of Indian cities; conurbations and metropolitan regions; urban sprawl; slums and associated problems; town planning; problems of urbanization.

iii) **Regional Development and Planning**: Experience of regional planning in India; Five Year Plans; integrated rural development programmes; panchayati raj and decentralized planning; command area development; watershed management;
planning for backward area, desert drought-prone, hill and tribal area development; multi-level planning; geography and regional planning.

iv) **Political Aspects:** Geographical basis of Indian federalism; state reorganization; regional consciousness and national integration; international boundary of India and related issues; disputes on sharing of water resources; India and geopolitics of the Indian Ocean.

v) **Contemporary Issues:** Environmental hazards–landslides, earthquakes, floods and droughts, epidemics; issues related to environmental pollution; changes in patterns of land use; principles of environmental impact assessment and environmental management; population explosion and food security; environmental degradation; problems of agrarian and industrial unrest; regional disparities in economic development; concept of sustainable growth and development.

*Note: Candidates will be required to answer one compulsory map question pertinent to subjects covered by this paper.*

**GEOLOGY – Optional (Main Examination)**

**Paper-1**

**Section-A**

(i) **General Geology**

(ii) **Geomorphology and Remote Sensing**

(iii) **Structural geology**

(iv) **Paleontology**

(v) Stratigraphy and Geology of India

Paper-II
Section-A

(i) Mineralogy

(ii) Igneous ad Metamorphic Petrology

(iii) Sedimentology
Section-B

(iv) Economic Geology

(v) Mining Geology

(vi) Geochemistry and Environmental Geology

History – Optional (Main Examination)

Paper-I

Section-A

1. Sources and approaches to study of early Indian history.
2. Early pastoral and agricultural communities. The archaeological evidence.
3. The Indus Civilization: its origins, nature and decline.
4. Patterns of settlement, economy, social organization and religion in India (c. 2000 to 500 B.C.): archaeological perspectives.
5. Evolution of north Indian society and culture: evidence of Vedic texts (Samhitas to Sutras).
7. Rise of Magadha; the Mauryan Empire. Ashoka’s inscriptions; his dhamma. Nature of the Mauryan state.
10-11 India in the Gupta and post-Gupta period (to c. 750): Political histroy of northern and peninsular India; Samanta system and changes in political structure; economy; social structure; culture; religion.
12. Themes in early Indian cultural history: languages and texts; major stages in the evolution of art and architecture; major philosophical thinkers and schools; ideas in science and mathematics.

Section-B

24. First half of 18th Century: Factors behind decline of the Mughal Empire. The regional principalities (Nizam's Deccan, Bengal, Awadh). Rise of Maratha ascendancy under the Peshwas. The Maratha fiscal and financial system. Emergency of Afghan
Power. Panipat, 1761. Internal weakness, political cultural and economic, on eve of the British conquest.

**Paper-II**

**Section-A**

1. Establishment of British rule in India: Factors behind British success against Indian powers-Mysore, Maratha Confederacy and the Punjab as major powers in resistance; Policy of subsidiary Alliance and Doctrine of Lapse.
2. Colonial Economy: Tribute system. Drain of wealth and "deindustrialization", Fiscal pressures and revenue settlements (Zamindari, Ryotwari and Mahalwari settlements); Structure of the British raj up to 1857 (including the Acts of 1773 and 1784 and administrative organisation).
3. Resistance to colonial rule: Early uprisings; Causes, nature and impact of the Revolt of 1857; Reorganization of the Raj, 1858 and after.
4. Socio-cultural impact of colonial rule: Official social reform measures (1828-57); Orientalist-Anglicist controversy; coming of English education and the press; Christian missionary activities; Bengal Renaissance; Social and religious reform movements in Bengal and other areas; Women as focus of social reform.
5. Economy 1858-1914: Railways; Commercialization of Indian agriculture; Growth of landless laborers and rural indebtedness; Famines; India as market for British industry; Customs removal, exchange and countervailing excise; Limited growth of modern industry.
6. Early Indian Nationalism: Social background; Formation of national associations; Peasant and tribal uprising during the early nationalist era; Foundation of the Indian National Congress; The Moderate phase of the Congress; Growth of Extremism; The Indian Council Act of 1909; Home Rule Movement; The Government of India Act of 1919.
7. Inter-War economy of India: Industries and problem of Protection; Agricultural distress; the Great Depression; Ottawa agreements and Discriminatory Protection; the growth of trade unions; The Kisan Movement; The economic programme of the Congress' Karachi resolution, 1931.
8. Nationalism under Gandhi's leadership: Gandhi's career, thought and methods of mass mobilization; Rowlatt Satyagraha, Khilafat- Non Cooperation Movement, Civil Disobedience Movement, 1940 Satyagraha and Quit India Movement; State People's Movement.
9. Other strands of the National Movement:
   a) Revolutionary movements since 1905; (b) Constitutional politics; Swarajists, Liberals, Responsive Cooperation; (c) Ideas of Jawaharlal Nehru, (d) The Left (Socialists and Communists); (e) Subhas Chandra Bose and the Indian National Army; (f) Communal strands: Muslim League and Hindu Mahasabha; (g) Women in the National Movement.
10. Literary and cultural movements: Tagore, Premchand, Subramanyam Bharati, Iqbal as examples only; New trends in art; Film industry; Writers' Organisations and Theatre Associations.
12. First phase of Independence (1947-64): Facing the consequences of Partition; Gandhiji's murder; economic dislocation; Integration of States; The democratic
13. **Enlightenment and Modern Ideas**
   1. Renaissance Background
   2. Major Ideas of Enlightenment: Kant, Rousseau
   3. Spread of Enlightenment outside Europe
   4. Rise of socialist ideas (to Marx)

14. **Origins of Modern Politics**
   1. European States System
   3. French revolution and after math, 1789-1815.
   4. British Democratic Politics, 1815-1850; Parliamentary Reformers, Free Traders, chartists.

15. **Industrialization**
   1. English Industrial Revolution: Causes and Impact on Society
   2. Industrialization in other countries: USA, Germany, Russia, Japan

16. **Nation-State System**
   1. Rise of Nationalism in 19th century
   2. Nationalism: state-building in Germany and Italy
   3. Disintegration of Empires through the emergence of nationalities.

17. **Imperialism and Colonialism**
   1. Colonial System (Exploitation of New World, Trans-Atlantic Slave Trade, Tribute from Asian Conquests)
   2. Types of Empire: of settlement and non-settlement: Latin America, South Africa, Indonesia, Australia.
   3. Imperialism and Free Trade: The New Imperialism

18. **Revolution and Counter-Revolution**
   1. 19th Century European revolutions
   2. The Russian Revolution of 1917-1921
   3. Fascist Counter-Revolution, Italy and Germany.
   4. The Chinese Revolution of 1949

19. **World Wars**
   1. 1st and 2nd World Wars as Total Wars: Societal Implications
   2. World War I: Causes and Consequences
   3. World War II: Political Consequence

20. **Cold War**
   1. Emergence of Two Blocs
   2. Integration of West Europe and US Strategy; Communist East Europe
   3. Emergence of Third World and Non-Alignment
   4. UN and Dispute Resolution

21. **Colonial Liberation**
   1. Latin America-Bolivar
   2. Arab World-Egypt
   3. Africa-Apartheid to Democracy
   4. South-East Asia-Vietnam

22. **Decolonization and Underdevelopment**
1. Decolonization: Break up of colonial Empires: British, French, Dutch
2. Factors constraining Development: Latin America, Africa

23. Unification of Europe
1. Post War Foundations: NATO and European Community
2. Consolidation and Expansion of European Community/European Union.

24. Soviet Disintegration and the Unipolar World
3. End of the Cold War and US Ascendancy in the World

LAW – Optional (Main Examination)
   Paper-I
   Section-A

Constitutional Law of India
2. Fundamental Rights.
4. Constitutional Position of the President and relation with the Council of Ministers.
5. Governor and his Powers.
6. Appointment and Transfer of Judges of the Supreme Court and the High Courts.
7. Supreme Court and High Courts: Powers and Jurisdiction.
9. Distribution of Legislative Powers between the Union and the States.
10. Administrative Relationship between Union and the States.
13. Parliamentary Privileges
15. Principle of Natural Justice

Section-B

International Law
1. Nature and Definition of International Law.
2. Relationship between International Law and Municipal Law
4. Sea: Inland Waters, Territorial Sea, Contiguous Zone, Continental Shelf, Exclusive Economic Zone and High Seas.
5. Individuals, nationality, statelessness; Human Rights and procedures available for their enforcement.
6. Territorial jurisdiction of States, Extradition and Asylum.
7. Treaties: Formation application, termination and reservation.
11. Legality of the use of nuclear weapons; ban on testing of nuclear weapons; Nuclear nonproliferation treaty, CTBT.

**Paper-II**

**Section-A**

**Law of Crimes:**
1. General Principles of Criminal Liability: mens rea and actus reus, Mens rea in statutory offences.
4. Preparations and criminal attempts
5. General exceptions.
7. Abetment.
8. Criminal conspiracy.
9. Offences against the State.
10. Offences against public tranquility.
11. Offences against human body.
12. Offences against property
14. Defamation
15. Protection of Civil Rights Act, 1955
16. Dowry Prohibition Act, 1961

**Law of Tort:**
2. Liability based upon fault and strict liability
3. Vicarious liability including State Liability.
5. Joint tortfeasors.
6. Remedies.
7. Negligence
8. Defamation.
10. Conspiracy
11. False imprisonment.
12. Malicious Prosecution.

**Section-B**

**Law of Contracts and Mercantile Law**
1. Formation of Contract
2. Factors vitiating consent
3. Void voidable, illegal and unenforceable agreements.
4. Performance and discharge of contracts.
5. Quasi-contracts.
6. Consequences of breach of contract
8. Sale of goods and hire purchase.
9. Formation and dissolution of partnership

English – Optional (Main Examination)
The syllabus consists of two papers, designed to test a first-hand and critical reading of texts prescribed from the following periods in English Literature: Paper I: 1600-1900 and Paper II: 1900-1990.
There will be two compulsory questions in each paper: a) A short-notes question related to the topics for general study, and b) A critical analysis of UNSEEN passages both in prose and verse.

Paper-I

Texts for detailed study are listed below. Candidates will also be required to show adequate knowledge of the following topics and movements:
The Renaissance : Elizabethan and Jacobean Drama; Metaphysical Poetry; The Epic and the Mock-epic; Neo-classicism; Satire; The Romantic Movement; The Rise of the Novel; The Victorian Age.

Section-A
1. William Shakespeare: King Lear and the Tempest.
2. John Donne. The following poems:
   - Canonization;
   - Death be not proud;
   - The Good Morrow;
   - On his Mistress going to bed;
   - The Relic;
5. William Wordsworth. The following poems:
   - Ode on Intimations of Immortality.
   - Tintern Abbey.
   - Three years she grew.
   - She dwelt among untrodden ways.
   - Michael.
   - Resolution and Independence.
   - The World is too much with us.
   - Milton, thou should be living at this hour.
   - Upon Westminster Bridge.
6. Alfred Tennyson: In Memoriam.

Section-B
6. Thomas Hardy. *Tess of the d'Urbervilles.*

**Paper-II**

**Answers must be written in English.**

Texts for detailed study are listed below. Candidates will also be required to show adequate knowledge of the following topics and movements:

- Modernism; Poets of the Thirties; The stream-of-consciousness Novel; Absurd Drama; Colonialism and Post-Colonialism; Indian Writing in English; Marxist, Psychoanalytical and Feminist approaches to literature; Post-Modernism.

**Section-A**

1. William Butler Yeats. The following poems:
   - Easter 1916
   - The Second Coming
   - A Prayer for my daughter.
   - Sailing to Byzantium.
   - The Tower.
   - Among School Children.
   - Leda and the Swan.
   - Meru
   - Lapis Lazuli
   - The Second Coming
   - Byzantium.

2. T.S. Eliot. The following poems:
   - The Love Song of J. Alfred Prufrock
   - Journey of the Magi.
   - Burnt Norton.

3. W.H. Auden. The following poems:
   - Partition
   - Musée des Beaux Arts
   - In Memory of W.B. Yeats
   - Lay your sleeping head, my love
   - The Unknown Citizen
   - Consider
   - Mundus Et Infans
   - The Shield of Achilles
   - September 1, 1939
   - Petition.

6. Philip Larkin. The following poems:
   - Next
   - Please
   - Deceptions
   - Afternoons
   - Days
   - Mr. Bleaney

7. A.K. Ramanujan. The following poems:
   - Looking for a Causim on a Swing
   - A River
- Of Mothers, among other Things
- Love Poem for a Wife
- Small-Scale Reflections on a Great House
- Obituary

(All these poems are available in the anthology Ten Twentieth Century Indian Poets, edited by R. Parthasarthy, published by Oxford University Press, New Delhi).

**Section-B**
1. Joseph Conrad. **Lord Jim**
2. James Joyce. **Portrait of the Artist as a Young Man.**
3. D.H. Lawrence. **Sons and Lovers.**
4. E.M. Forster. **A Passage to India.**
5. Virginia Woolf. **Mrs Dalloway.**
6. Raja Rao. **Kanthapura.**
7. V.S. Naipal. **A House for Mr. Biswas.**

**Hindi – Optional (Main Examination)**

**Paper-I**

**Answers must be written in Hindi.**

**Section-A**

1. History of Hindi Language and Nagari Lipi.
   I. Grammatical and applied forms of Apbhrransh, Awahatta & Arambhik Hindi.
   II. Development of Braj and Awadhi as literary language during medieval period.
   III. Early form of Khari-boli in Siddha-Nath Sahitya, Khusero, Sant Sahitya, Rahim etc. and Dakhni Hindi.
   IV. Development of Khari-boli and Nagari Lipi during 19th Century.
   V. Standardisation of Hindi Bhasha & Nagari Lipi.
   VI. Development of Hindi as national Language during freedom movement.
   VII. The development of Hindi as a National Language of Union of India.
   VIII. Scientific & Technical development of Hindi Language.
   IX. Prominent dialects of Hindi and their inter relationship.
   X. Salient features of Nagari Lipi and the efforts for its reform & Standard form of Hindi.
   XI. Grammatical structure of Standard Hindi.

**Section-B**

2. History of Hindi Literature.
   I. The relevance and importance of Hindi literature and tradition of writing History of Hindi Literature.
   II. Literary trends of the following four periods of history of Hindi Literature.
   A : Adikal-Sidh, Nath and Raso Sahitya.
   Prominent poets-Chandvardai, Khusaro, Hemchandra, Vidyapati.
   B : Bhaktikal-Sant Kavyadhara, Sufi Kavyadhara, Krishna Bhaktidhara and Ram Bhaktidhara.
   Prominent Poets-Kabir, Jayasi, Sur & Tulsi.
   C: Ritikal-Ritikavya, Ritibaddhakavya & Riti Mukta Kavya.
   Prominent Poets-Keshav, Bihari, Padmakar and Ghananand.
D : Adhunik Kal
a. Renaissance, the development of Prose, Bharatendu Mandal.
Prominent Poets: Maithili Sharan Gupta, Prasad, Nirala, Mahadevi, Dinkar, Agyeya, Muktibodh, Nagarjun.

III. Katha Sahitya
A. Upanyas & Realism
B. The origin and development of Hindi Novels.
C. Prominent Novelists: Premchand, Jainendra, Yashpal, Renu and Bhism Sahani.
D. The origin and development of Hindi short story.
E. Prominent short Story Writers: Premchand, Prasad, Agyeya, Mohan Rakesh & Krishana Shobti.

IV. Drama & Theatre
A. The origin & Development of Hindi Drama.
B. Prominent Dramatists : Bharatendu, Prasad, Jagdish Chandra Mathur, Ram Kumar Verma, Mohan Rakesh.
C. The development of Hindi Theater.

V. Criticism
A: The origin and development of Hindi criticism: Saiddhantik, Vyavharik, Pragativadi, Manovishleshanvadi & Nai Alochana.
B: Prominent critics: Ramchandra Shukla, Hajari Prasad Dwivedi, Ram Vilas Sharma & Nagendra.

VI. The other forms of Hindi prose-Lalit Nibandh, Rekhachitra, Sansmaran, Yatra-vrittant.

Paper-II
Answers must be written in Hindi.
This paper will require first hand reading of prescribed texts and will test the critical ability of the candidates.

Section-A
1. Kabir : Kabir Granthawali, Ed, Shyam Sundar Das (First hundred Sakhis.)
2. Surdas : Bhramar Gitsar, Ed. Ramchandra Shukla (First hundred Padas)
3. Tulsidas : Ramchrit Manas (Sundar Kand) Kavitawali (Uttar Kand).
5. Bihari: Bihari Ratnakar Ed. Jagannath Prasad Ratnakar (First 100 Dohas)
6. Maithili Sharan Gupta: Bharat Bharati
7. Prasad: Kamayani (Chinta and Sharadha Sarg)
9. Dinkar : Kurushetra
10. Agyeya : Angan Ke Par Dwar (Asadhya Vina)
11. Muktiboth : Brahma Rakshas

Section-B
1. Bharatendu : Bharat Durdasha
2. Mohan Rakesh : Ashad Ka Ek Din
3. Ramchandra Shukla : Chintamani (Part I)
   (Kavita Kya Hai] Shraddha Aur Bhakti)
4. Dr. Satyendra : Nibandh Nilaya-Bal Krishna Bhatt, Premchand, Gulab Rai, Hajari
   Prasad Dwivedi, Ram Vilas Sharma, Agyeiya, Kuber Nath Rai.
5. Premchand : Godan, Premchand ki Sarvashreshtha Kahaniyan, Ed. Amrit Rai,
   Manjusha - Premchand ki Sarvashreshtha Kahaniyan, Ed. Amrit Rai
6. Prasad : Skandgupta
7. Yashpal : Divya
8. Phaniswar Nath Renu : Maila Anchal
9. Mannu Bhandari : Mahabhoj
10. Rajendra Yadav : Ek Dunia Samanantar (All Stories)

MANIPURI – Optional (Main Examination)

Paper-I
Answers must be written in Manipuri.
Section-A

Language :

a) General characteristics of Manipuri Language and history of its development; its
   importance and status among the Tibeto-Burman Languages of North-East India;
   recent development in the study of Manipuri language; evolution and study of old
   Manipuri script.

b) Significant features of Manipuri language:
   i) Phonology-Phoneme-vowels, consonants juncture, tone, consonant cluster and its
      occurrence, syllable-its structure, pattern and types.
   ii) Morphology: Word-class, root and its types; affix and its types; grammatical
      categories-gender, number, person, case, tense and aspects, process of
      compounding (samas and sandhi).
   iii) Syntax: Word order: types of sentences, phrase and clause structures.

Section-B

a) Literary History of Manipuri:
   Early period (up to 17th century)-Social and cultural background;
   Themes, diction and style of the works.
   Medieval period (18th and 19th century) - Social, religious and political
   background; Themes, diction and style of the works.
   Modern period-Growth of major literary forms; change of Themes,
   diction and style.

b) Manipuri Folk Literature:
   Legend, Folktale, Folksong, Ballad, Proverb and Riddle.

c) Aspects of Manipuri Culture:
   Pre-Hindu Manipuri Faith; Advent of Hinduism and the process of
   syncretism.
   Performing arts-Lai Haraoba, Maha Ras; Indigenous games-Sagol
   Kangjei, Khong Kangjei, Kang.

PAPER II

Answers must be written in Manipuri.

This paper will require first hand reading of the texts prescribed and will be designed
to test the candidate’s critical ability to assess them.

Section-A

Old and Medieval Manipuri Literature
a) Old Manipuri Literature
1. O. Bhogeswar Singh (Ed.): Numit Kappa
2. M. Gourachandra Singh (Ed.): Thawanthaba Hiran
3. N. Khelchandra Singh (Ed.): Naotingkhong Phambal Kaba
4. M. Chandra Singh (Ed.): Panthoibi Khonggul

b) Medieval Manipuri Literature:
1. M. Chandra Singh (Ed.): Samsok Ngamba
2. R.K. Snahal Singh (Ed.): Ramayana Adi Kanda
3. N. Khelchandra Singh (Ed.): Dhananjoy Laibu Ningba
4. O. Bhogeswar Singh (Ed.): Chandrakirti Jila Chatpa

Section B

Modern Manipuri Literature:

a) Poetry and Epic:
(l) Poetry:
a) Manipuri Sheireng (Pub) Manipuri Sahitya Parishad, 1988 (ed.)
Kh. Chaoba Singh: Pi Thadoi, Lamgi Chekla Amada, Loktak Mapanda
Dr. L. Kamal Singh: Nirjanata, Nirab Rajani
A. Minaketan Singh: Kamalda, Nonggumlakkhoda
L. Samarendra Singh: Ingagi Nong, Mamang Leikai Thambal Satle
E. Nilakanta Singh: Manipur, Lamangnaba
Shri Biren: Tangkhul Hui
Th. Ibopishak: Anouba Thunglaba Jiba

b) Kanchi Sheireng. (Pub) Manipur University 1998 (ed.)
Dr. L. Kamal Singh: Biswa-Prem
Shri Biren: Chaphadraba Laigi Yen
Th. Ibopishak: Norok Patal Prithivi

(II) Epic:
1. A. Dorendrajit Singh: Kangsa Bodha
2. H. Anganghal Singh: Khamba-Thoibi Sheireng (San-Senba, Lei-Langba, Shamu Khonggi Bichar)

(III) Drama:
1. S. Lalit Singh: Areppa Marup
2. G.C. Tongbra: Matric Pass
3. A. Samarendra: Judge Sahebki Imung

b) Novel, Short-story and Prose:
(l) Novel:
1. Dr. L. Kamal Singh: Madhabi
2. H. Anganghal Singh: Jahera
3. H. Guno Singh: Laman
4. Pacha Meetei: Imphal Amasung, Magi Iaching, Nungsitki Phibam

(II) Short-story:
a) Kanchi Warimacha (Pub) Manipur University 1997 (ed.)
R.K. Shitaljit Singh: Kamala Kamala
M.K. Binodini: Eigi Thahoudraba Heitup Lalu
Kh. Prakash: Wanom Shareng

b) Parishadki Khangatlab Warimacha (Pub) Manipuri Sahitya Parishad 1994 (ed.)
S. Nilbir Shastri: Loukhatpa
R.K. Elangba: Karinunggi
Management – Optional (Main Examination)

Paper-I

The candidate should make a study of the concept and development of management as science and art drawing upon the contributions of leading thinkers of management and apply the concepts to the real life of government and business decision making keeping in view the changes in the strategic and operative environment.

Section-A

Section-B

VI. **Business Environment**: Concept and Analysis of Macro-business environment: Indian and global. Analysis of structural dimensions of Indian Economy. Directions

Paper-II
Section-A

Section-B

Mathematics – Optional (Main Examination)

Paper-I

Section-A

Linear Algebra
Vector, space, linear dependence and independence, subspaces, bases, dimensions. Finite dimensional vector spaces.
Matrices, Cayley-Hamilton theorem, eigenvalues and eigenvectors, matrix of linear transformation, row and column reduction, Echelon form, equivalence, congruences and similarity, reduction to canonical form, rank, orthogonal, symmetrical, skew symmetrical, unitary, hermitian, skew-hermitian forms—their eigenvalues. Orthogonal and unitary reduction of quadratic and hermitian forms, positive definite quadratic forms.

Calculus
Real numbers, limits, continuity, differentiability, mean-value theorems, Taylor's theorem with remainders, indeterminate forms, maxims and minima, asymptotes. Functions of several variables: continuity, differentiability, partial derivatives, maxima and minima, Lagrange's method of multipliers, Jacobian. Riemann's definition of definite integrals, indefinite integrals, infinite and improper integrals, beta and gamma functions. Double and triple integrals (evaluation techniques only). Areas, surface and volumes, center of gravity.

Analytic Geometry:
Cartesian and polar coordinates in two and three dimensions, second degree equations in two and three dimensions, reduction to canonical forms, straight lines, shortest distance between two skew lines, plane, sphere, cone, cylinder., parabolic, ellipsoid, hyperboloid of one and two sheets and their properties.

Section-B

Ordinary Differential Equations:
Formulation of differential equations, order and degree, equations of first order and first degree, integrating factor, equations of first order but not of first degree, Clairaut's equation, singular solution.
Higher order linear equations, with constant coefficients, complementary function and particular integral, general solution, Euler-Cauchy equation.
Second order linear equations with variable coefficients, determination of complete solution when one solution is known, method of variation of parameters.

Dynamics, Statics and Hydrostatics:
Degree of freedom and constraints, rectilinear motion, simple harmonic motion, motion in a plane, projectiles, constrained motion, work and energy, conservation of energy, motion under impulsive forces, Kepler's laws, orbits under central forces, motion of varying mass, motion under resistance.
Equilibrium of a system of particles, work and potential energy, friction, common catenary, principle of virtual work, stability of equilibrium, equilibrium of forces in three dimensions.
Pressure of heavy fluids, equilibrium of fluids under given system of forces Bernoulli's equation, centre of pressure, thrust on curved surfaces, equilibrium of floating bodies, stability of equilibrium, metacentre, pressure of gases.

**Vector Analysis:**
Scalar and vector fields, triple, products, differentiation of vector function of a scalar variable, gradient, divergence and curl in Cartesian, cylindrical and spherical coordinates and their physical interpretations. Higher order derivatives, vector identities and vector equations.
Application to Geometry: Curves in space, curvature and torsion. Serret-Frenet's formulae, Gauss and Stokes' theorems, Green's identities.

**Paper-II**

**Section-A**

**Algebra:**
Groups, subgroups, normal subgroups, homomorphism of groups quotient groups basic isomorphism theorems, Sylow's group, permutation groups, Cayley theorem. Rings and ideals, principal ideal domains, unique factorization domains and Euclidean domains. Field extensions, finite fields.

**Real Analysis:**
Real number system, ordered sets, bounds, ordered field, real number system as an ordered field with least upper bound property, Cauchy sequence, completeness, Continuity and uniform continuity of functions, properties of continuous functions on compact sets. Riemann integral, improper integrals, absolute and conditional convergence of series of real and complex terms, rearrangement of series. Uniform convergence, continuity, differentiability and inerrability for sequences and series of functions. Differentiation of functions of several variables, change in the order of partial derivatives, implicit function theorem, maxima and minima. Multiple integrals.

**Complex Analysis:**

**Linear Programming:**
Linear programming problems, basic solution, basic feasible solution and optimal solution, graphical method and Simplex method of solutions. Duality. Transportation and assignment problems. Travelling salesman problems.

**Section-B**

**Partial differential equations:**
Curves and surfaces in three dimensions, formulation of partial differential equations, solutions of equations of type \( \frac{dx}{p} = \frac{dy}{q} = \frac{dz}{r} \); orthogonal trajectories, pfaffian differential equations; partial differential equations of the first order, solution by Cauchy's method of characteristics; Charpit's method of solutions, linear partial differential equations of the second order with constant coefficients, equations of vibrating string, heat equation, Laplace equation.

**Numerical Analysis and Computer programming:**
Numerical methods: Solution of algebraic and transcendental equations of one variable by bisection, Regula-Falsi and Newton-Raphson methods, solution of system of linear equations by Gaussian elimination and Gauss-Jordan (direct) methods, Gauss-Seidel( iterative) method. Newton's (Forward and backward) and Lagrange's method of interpolation.
Numerical integration: Simpson's one-third rule, trapezoidal rule, Gaussian quadrature formula.
Representation of unsigned integers, signed integers and reals, double precision reals and long integers.
Algorithms and flow charts for solving numerical analysis problems.
Developing simple programs in Basic for problems involving techniques covered in the numerical analysis.

Mechanics and Fluid Dynamics:
Generalized coordinates, constraints, holonomic and non-holonomic, systems. D' Alembert's principle and Lagrange's equations, Hamilton equations, moment of intertia, motion of rigid bodies in two dimensions.
Equation of continuity, Euler's equation of motion for in viscid flow, stream-lines, path of a particle, potential flow, two-dimensional and axisymmetric motion, sources and sinks, vortex motion, flow past a cylinder and a sphere, method of images. Navier-Stokes equation for a viscous fluid.

Mechanical Engineering – Optional (Main Examination)

Paper-I

1. Theory of Machines
Kinematic and dynamic analysis of planar mechanisms. Cams, Gears and gear trains, Flywheels, Governors, Balancing of rigid rotors, Balancing of single and multicylinder engines, Linear vibration analysis of mechanical systems (single degree and two degrees of freedom), Critical speeds and whirling of shafts, Automatic Controls, Belts and chain drives. Hydrodynamic bearings.

2. Mechanics of Solids:
Stress and strain in two dimensions. Principal stresses and strains, Mohr's construction, linear elastic materials, isotropy and an isotropy, Stress-strain relations, uniaxial loading, thermal stresses. Beams: Bending moment and shear force diagrams, bending stresses and deflection of beams, Shear stress distribution. Torsion of shafts, helical springs. Combined stresses, thick and thin walled pressure vessels. Struts and columns, Strain energy concepts and theories of failure. Rotating discs. Shrink fits.

3. Engineering Materials:

4. Manufacturing Science:

5. Manufacturing management:
Production Planning and Control, Forecasting-Moving average, exponential smoothing, Operations scheduling; assembly line balancing. Product development. Breakeven analysis, Capacity planning. PERT and CPM.
Value Engineering: Value analysis, for cost/value. Total quality management and forecasting techniques. Project management.
6. ELEMENTS OF COMPUTATION:

PAPER-II
1. THERMODYNAMICS:
Basic concept. Open and closed systems, Applications of Thermodynamic Laws, Gas equations, Clapeyron equation, Availability, Irreversibility and Tds relations.
2. I.C. Engines, Fuels and Combustion:
Spark ignition and compression ignition engines, four stroke engine and two stroke engines, mechanical, thermal and volumetric efficiency, Heat balance.
3. HEAT TRANSFER, REFRIGERATION AND AIR CONDITIONING:
4. TURBO-MACHINES AND POWER PLANTS:
Continuity, momentum and Energy Equations. Adiabatic and Isentropic flow, fanno lines, Rayleigh lines. Theory and design of axial flow turbines and compressors, Flow through turbo-machine balde, cascades, centrifugal compressor. Dimensional analysis and modelling. Selection of site for steam, hydro, nuclear and stand-by power plants, Selection base and peak load power plants, Modern High pressure, High duty boilers, Draft and dust removal equipment, Fuel and cooling water systems, heat balance, station and plant heat rates, operation and maintenance of various power plants, preventive maintenance, economics of power generation.

MEDICAL SCIENCE – Optional (Main Examination)
Paper-I
Section-A
I. Human Anatomy : Gross and microscopic anatomy and movements of shoulder, hip and knee joints; Blood supply, nerve innervation of hand, Lymphatic system; Karyotyping, medical genetics; Electron microscopic structure of glomerulus and muscle; Gross and microscopic anatomy and blood supply of lungs, heart, kidneys, liver, testis and uterus; Gross anatomy of pelvis, perineum and inguinal region. Cross-
sectional anatomy of the body and mid-thoracic, upper abdominal, mid-abdominal and pelvic regions.

**Embryology:** Major steps in the development of lung, heart, kidney, urinary bladder, uterus, ovary, testis and their common congenital abnormalities; Placenta and placental barrier.

**Anatomy of central and peripheral autonomic nervous system:**
Neural pathways for cutaneous sensations and vision; Cranial nerves, distribution and clinical significance; Anatomy of autonomic control of gastrointestinal, respiratory and reproductive systems.

II. **Human Physiology:** Central, peripheral and autonomic nervous system; Nerve and muscle excitation, conduction and transmission of impulse, mechanism of contraction, neurovascular transmission, EMG; Synaptic transmission, reflexes, control of equilibrium, posture and muscle tone descending pathways, functions of cerebellum, basal ganglia, reticular formation, hypothalamus limbic system and cerebral cortex; Physiology of sleep and consciousness, EEG.; Higher functions of the brain; Vision and hearing.

**Endocrine system:** Mechanism of action of hormones, formation, secretion, transport, metabolism, functions and regulations of secretion of pancreas and pituitary glands.

**Physiology of reproductive system:** menstrual cycle, lactation, pregnancy.

**Blood:** Development, regulations and fate of blood cells.

**Cardio-vascular, respiratory gastro-intestinal and renal physiology:** Cardiac excitation, spread of cardiac impulse, ECG., cardiac output, blood pressure, regulation of cardiovascular functions; Mechanics of respiration and regulation of respiration; Digestion and absorption of food, regulation of secretion and motility of gastrointestinal tract; Glomerular and tubular functions of kidney.

III. **Biochemistry:** pH and pK Henderson-Hassemalch Equation; Properties and regulation of enzyme activity, role of high energy phosphates in bioenergetics; Sources, daily requirements, action and toxicity of vitamins; Metabolism of lipids, carbohydrates, proteins, disorders of their metabolism; Chemical nature, structure, synthesis and functions of nucleic acids and proteins; Distribution and regulation of body water and minerals including trace elements; Blood Gas Analysis, GTT, Immuno electrophoresis, molecular structure of muscle contractile protein, oestrogen receptors.

**Section-B**

I. **Pathology:** Reaction of cell and tissue of injury, inflammation and repair, disturbances of growth and cancer. Genetic diseases; Pathogenesis and histopathology of Rheumatic and ischemic heart disease; Bronchogenic carcinoma, carcinoma breast, oral cancer, cancer colon. Lymphoma, leukemia, liver cancer, meningioma and meningitis; Etiology, pathogenesis and histopathology of - Peptic ulcer, cirrhosis liver glomerulonephritis, lobar pneumonia, acute osteomyelitis, hepatitis, acute pancreatitis.

II. **Microbiology:** Growth of micro-organisms, sterilization and disinfection, bacterial genetics, virus-cell interactions; Immunological principles, acquired immunity, immunity in infections cause by viruses; Diseases caused by and laboratory diagnosis of Staphylococcus, enterococcus, salmonella, shigella, secheichiza, pseudomonos, vibrio, adenoviruses, herpes viruses (including rubella__, fungi, protozoa, helminthes, leptospiral infection.

III. **Pharmacology:** Drug receptor instruction, mechanism of drug action; Mechanism of action, dosage, metabolism and side effects of - Pilocarpine, terbutaline, metoprolol

IV. Forensic Medicine and Toxicology: Forensic examination of injuries and wounds; Physical and chemical examination of blood and seminal stains; Organo phosphorous poisoning, sedative overdose, hanging, drowning, burns, snake envenomation.

Paper-II
Section-A

1. General Medicine:
Etiology, clinical features, diagnosis and principles of management (including prevention) of:- Malaria, Typhoid, Cholera, Tetanus, Rabies, Exanthematous Fevers, Tuberculosis, AIDS.
Etiology, clinical features, diagnosis and principles of management of: Rheumatic, ischemic and congenital heart disease, hypertension. Cardiomyopathy, pulmonary embolism.
Acute and chronic respiratory infections, bronchial asthma.
Occupational lung disease, pleural effusion, disseminated tuberculosis Malabsorption syndromes, acid peptic diseases, hematemesis. Viral hepatitis, cirrhosis of liver, alcoholic liver disease.
Acute glomerulonephritis, chronic pyelonephritis, renal failure, nephritic syndrome, endovascular hypertension, diabetics mellitus, anemia’s, coagulation disorders, leukemia, polycythemia and hyper viscosity syndrome, meningitis encephalitis, cerebrovascular diseases.
Role of Immageology in the work-up of medical problems, ultrasound, echo cardiogram, CT scan MRI.
Psychiatry : Common psychiatric disorders, schizophrenia, ECT, lithium

Section-B

I. General Surgery:
Clinical features, causes diagnosis and principles of management of: Cervical lymph node enlargement, parotid tumor, oral cancer, cleft palate, hare lip.
Laryngeal tumor, esophageal tumors.
Peripheral arterial diseases, varicose veins, coarctation of aorta
Dysfunctions of thyroid parathyroid and adrenals.
Tumors of Thyroid, Parathyroid, Adrenal, Pituitary Glands.
Abscess of breast, cancer breast, fibro adenoma and adenosis
Acute and chronic appendicitis, bleeding peptic ulcer, tuberculosis of bowel, intestinal obstruction, ulcerative colitis.
Renal mass, acute retention of urine, benign prostatic hypertrophy.
Haemorrhax, constrictive pericarditis
Splenomegaly, chronic choleystitis, portal hypertension, liver abscess, peritonitis, carcinoma head of pancreas.
Direct and indirect inguinal hernias and their complications.
Fractures of femur and spine, Colles’ fracture and bone tumors.
Organis transplantation, kidney, liver, heart, bone-marrow.
Laparoscopic Surgery.

II. Obstetrics and gynecology including Family Planning.
Diagnosis of pregnancy, screening of high risk pregnancy, foetoplacental development.
Labor management, complications of 3rd stage, postpartum hemorrhage, resuscitation of the newborn.
Diagnosis and management of anemia and pregnancy induced hypertension.
Principles of the following contraceptive methods.
Intra-uterine devices, pills, tubectomy and vasectomy. Medical termination of pregnancy including legal aspects.
Etiology, clinical features, diagnosis and principles of management of: Cancer cervix.
Leucorrhoea, pelvic pain, infertility, abnormal uterine bleeding, amenorrhea.

III. Preventive and Social medicine.
Concept of causation and control of disease in the community, principles and methods of epidemiology.
Health hazards due to environmental pollution and industrialization.
Normal nutrition and nutritional deficiency diseases in India.
Population trends (World and India),
Growth of population and its effect on health and development.
Objectives, components and critical analysis of each of the following National programmes for the control/eradication of:
Malaria, filaria, kala-azar, leprosy, tuberculosis, cancer, blindness, iodine deficiency disease, AIDS & std and guinea worm.
Objectives, components critical analysis of each of the following national Health and Family Welfare Programmes:
Maternal and child health
Family welfare
Nutrition
Immunization.

Philosophy – Optional (Main Examination)

Paper-I

History and Problems of Philosophy

Section-A

3. Descartes: Cartesian Method and certain knowledge, God, Mind-Body Dualism.
4. Spinoza: Substance, Attributes and Modes, Pantheism; Bondage and Freedom.
5. Leibnitz: Monads; Theory of Perception God.
9. Kant: Distinctions between synthetic and analytic judgments and between apron and a posteri judgments, Space, Time Categories, Possibility of Synthetic Apriori
Judgments, Ideas of Reason and Antinomies; Criticism of the Proofs for the Existence of God.

15. Existentialism: Kierkegaard, Sartre.
16. Quine: Radical empiricism.

Section-‘B’

Paper-II

Section-‘A’
Socio-Political Philosophy
2. Sovereignty (Austin, Boidin, Laski, Kautilya).
3. Individual and State.
4. Democracy; Concept and forms.
5. Socialism and Marxism.
6. Humanism.
7. Secularism.
8. Theories of punishment.
9. Co-existence and violence; Sarvoday.

Section-‘B’
Philosophy of Religion
3. Immortality of Soul:
4. Liberation.
5. Problem of Evil.
7. Religion without God.
8. Religion and Morality.
1. Classical Mechanics
   (a) Particle dynamics
   Centre of mass and laboratory coordinates, conservation of linear and angular momentum. The rocket equation. Rutherford scattering, Galilean transformation, inertial and non-inertial frames, rotating frames, centrifugal and Coriolis forces, Foucault pendulum.
   (b) System of particles
   Constraints, degrees of freedom, generalized coordinates and momenta. Lagrange’s equation and applications to linear harmonic oscillator, simple pendulum and central force problems. Cyclic coordinates, Hamiltonian Lagrange’s equation from Hamilton’s principle.
   (c) Rigid body dynamics
   Eulerian angles, inertia tensor, principal moments of inertia. Euler's equation of motion of a rigid body, force-free motion of a rigid body. Gyroscope.

2. Special Relativity, Waves & Geometrical Optics
   (a) Special Relativity
   Michelson-Morley experiment and its implications. Lorentz transformations-length contraction, time dilation, addition of velocities, aberration and Doppler effect, mass-energy relation, simple applications to a decay process. Minkowski diagram, four dimensional momentum vector. Covariance of equations of physics.
   (b) Waves
   (c) Geometrical Optics

3. Physical Optics
   (a) Interference
   Interference of light-Young’s experiment, Newton’s rings, interference by thin films, Michelson interferometer. Multiple beam interference and Fabry-Perot interferometer. Holography and simple applications.
   (b) Diffraction
   Fraunhofer diffraction-single slit, double slit, diffraction grating, resolving power. Fresnel diffraction: - half-period zones and zones plates. Fresnel integrals. Application of Cornu’s spiral to the analysis of diffraction at a straight edge and by a long narrow slit. Diffraction by a circular aperture and the Airy pattern.
   (c) Polarization and Modern Optics

Section-B

4. Electricity and Magnetism
(a) **Electrostatics and Magneto statics**

(b) **Current Electricity**

5. **Electromagnetic Theory & Black Body Radiation**

(a) **Electromagnetic Theory**

(b) **Blackbody radiation**

Blackbody radiation and Planck radiation law—Stefan-Boltzmann law, Wien displacement law and Rayleigh-Jeans law. Planck mass, Planck length, Planck time, Planck temperature and Planck energy.

6. **Thermal and Statistical Physics**

(a) **Thermodynamics**

(b) **Statistical Physics**

**Paper-II**

**Section-A**

1. **Quantum Mechanics I**

2. **Quantum Mechanics II & Atomic Physics**

(a) **Quantum Mechanics II**

(b) **Atomic Physics**

3. **Molecular Physics**

**Section-B**

4. **Nuclear Physics**

5. **Particle Physics & Solid State Physics**
(a) **Particle Physics**

(b) **Solid State Physics**
Cubic crystal structure. Band theory of solids-conductors, insulators and semiconductors. Elements of superconductivity, Meissner effect, Josephson junctions and applications. Elementary ideas about high temperature superconductivity.

6. **Electronics**

**Political Science and International Relations - Optional**

(Main Examination)

**Paper-I**

**Political Theory and Indian Politics**

**Section-A**

1. Approaches to the study of political theory: historical, normative and empirical.
5. Theories of Political Culture; Culture and politics in Third World countries.
6. Theories of Political Economy: Classical and contemporary.
7. Political Ideologies: Nature of Ideology; Liberalism, Socialism, Marxism, Fascism, Gandhism and Anarchism.

Section-B

Indian Government and Politics
1. Indian Nationalism: Dadabhai Naoroji, Tilak, Savarkar, Gandhi, Jayaprakash Narain, Nehru, Subhas Bose, Ambedkar, Ram Manohar Lohia.
3. Socio-economic dimensions of the nationalist movement: The communal question and the demand for partition; backward caste movements, Trade union and Peasant movements, Civil rights movement.
6. The Executive System in theory and practice: President, Prime Minister and the Council of Ministers; Governor, Chief Minister and the State Council of Ministers. The Bureaucracy.
7. Role and function of the Parliament and Parliamentary Committee-Lok Sabha and Rajya Sabha; changing socio economic profile.
8. The Supreme Court and the High Courts; Judicial Activism; PIL.
11. Class, caste, ethnicity and gender in Indian politics; politics of regionalism, communalism, backward class and Dalit movements, Tribal people movements, struggle for gender justice.
12. Planning and Economic Development: Role of the Planning Commission; Planning in the era of liberalization; political dimensions of economic reforms.

Paper - II

Comparative Politics and International Relations

Section-A

Comparative Analysis and International Politics
1. Approaches to the study of comparative politics: traditional approaches; political economy, political sociology or political system approaches; Nature of political process in the Third World.
2. The Modern State: Evolution, the contemporary trends in the advanced industrial countries and the third world.
5. Theories of International politics Marxist, Realist, Systems, Decision-making and Game Theory.
6. Determinants of foreign policy: Domestic compulsions, geopolitics, geo-economics and global order.
7. Origin and contemporary relevance of the Cold War, nature of the post-cold war global order.
8. Major issues of world politics: Cuban Missile Crisis; Vietnam War, Oil Crisis, Afghan Civil War, Gulf War, Collapse of the Soviet Union, Yugoslav Crisis.
10. The evolution of the international economic system—from Bretton woods to WTO, the North-South dimension.
11. International organizations UN and its specialized agencies: International Court of Justice; ILO, UNICEF, WHO UNESCO.
12. Regional organizations such as the ASEAN, APEC, EU, SAARC, NAFTA.

Section-B

India and the World
1. Indian Foreign Policy: Historical origins, determinants; the institutions of policy-making; continuity and change.
2. India and the Non-Alignment Movement: Evolution and contemporary relevance. Socio-political basis of non-alignment—domestic and global.
3. Major issues in Indian foreign policy: Sino-Indian Border War (1962); Indo-Pakistan War (1971) and the liberation of Bangladesh; IPKF in Sri Lanka; India as military nuclear power (1998).
4. Conflict and co-operation in South Asia: India’s relations with Pakistan, Sri Lanka, Bangladesh, Nepal. Regional co-operation and SAARC. Kashmir question in India’s foreign policy.
5. India’s relation with Africa and Latin America.
6. India and South East Asia; ASEAN.
7. India and the major powers: USA, EU, China, Japan and Russia.
8. India and the UN System: India’s role in UN Peace Keeping and global disarmament.
9. India and the emerging international economic order; multilateral agencies—WTO, IMF, IBRD, ADB.
10. India and the question of nuclear weapons: NPT and CTBT.
Psychology – Optional (Main Examination)
Paper-I

Foundations of Psychology

Section-A

1. Introduction: Psychology as a Science: Definitions and perspective. Psychology in relation to other social and natural sciences. Use of interdisciplinary approach.

5. Attention and perception: Attention - factors, influencing attention including set and characteristics of stimulus. Sensation-concepts of threshold, absolute and difference thresholds, signal detection and vigilance. Definition and concept of perception, biological factors in perception. Perceptual organization-influence of past experiences, Perceptual defense-factors influencing. Space and depth perception, size estimation and perceptual readiness.

Section-B

9. Intelligence and Aptitude: Concept and definition of Intelligence and aptitude, Nature and theories of intelligence. Measurement of Intelligence and aptitude Concepts and measurement of emotional and multiple intelligence.

11. Personality: Concept and definition of personality. Theories of personality (psychoanalytical, socio-cultural, interpersonal and developmental, humanistic, behavioristic, trait and type approaches). Measurement of personality (projective
tests, pencil-paper test). The Indian approach to Personality. Training for personality development.

12. **Language and Communication**: Human language-properties, structure and linguistic hierarchy, Language acquisition-predisposition, critical period hypothesis. Theories of language development (Skinner, Chomsky), Process and types of communication. Effective communication and training.

13. **Attitudes, Values and Interests**: Definitions, concepts of attitudes, values and interests. Components of attitudes, values and interests. Formation and maintenance of attitudes. Measurement of attitudes, values and interests. Theories of attitudes, and attitudes changes, strategies for fostering values.

---

**Paper-II**

**Psychology: Issues and Applications**

**Section-A**

2. **Wellbeing and Mental Disorders**: Concept of health, positive health, wellbeing and ill health. Mental disorders (Anxiety disorders, mood disorders, schizophrenia and delusional disorders; personality disorders, substance abuse disorders). Causal factors in mental disorders. Factors influencing positive health, wellbeing, life style and quality of life.

5. **Application of Psychology to Educational Field**: Psychological principles underlying effective teaching-learning process. Learning styles Gifted, retarded, learning disabled and their training. Training for improving memory and better academic achievement. Personality development and value education, Educational, vocational guidance and Career counselling. Use of Psychological tests in educational institutions.

6. **Community Psychology**: Definition and concept of Community Psychology. Role of community psychologists in social change. Use of small groups in social action. Arousing community consciousness and action for handling social problems. Group decision making and leadership for social change.

Section-B

8. **Application of Psychology to disadvantaged groups:** The concepts of disadvantaged, deprivation and socially deprived. Social, physical, cultural and economic consequences of disadvantaged and deprived groups. Educating and motivating the disadvantaged towards development.

9. **Psychological and the problem of social integration:** The concept of social integration. The problem of caste, class, religion and language conflicts and prejudice. Nature and manifestation of prejudice between the in-group and out-group. Casual factors of such conflicts and prejudices. Psychological strategies for handling the conflicts and prejudices. Measures to achieve social integration.

10. **Application of psychology in Information Technology and Mass media:** The present scenario of information technology and the mass media boom and the role of psychologists. Selection and training of psychology professionals to work in the field of IT and mass media. Distance learning through IT and mass media. Entrepreneurship through e-commerce. Multilevel marketing. Impact of TV and fostering value through IT and mass media. Psychological consequences of recent developments in Information Technology.

11. **Application of Psychology in the field of Defense:** The concept of Military psychology, Aviation psychology and Psychological warfare Role of Military psychologists in the defense. Selection, recruitment and training of personnel. Facilitating the process of adjustment of personnel to military life-Role of Counselling. Devising Psychological tests for defense personnel. Psychological disorders due to war. Human engineering in Defense.

13. **Application of psychology to environment and related fields:** Environmental psychology—effects of noise, pollution and crowding. Population psychology—psychological consequences of population explosion and high population density. Motivating for small family norms. Impact of rapid scientific and technological growth on degradation of environment.

14. **Other applications of psychology:** Sports psychology—improving performance of sports, personnel, psychology and understanding of political behavior. Voting behaviors. Psychology of corruption and strategies to deal with Psychology of terrorism.

---

**Public Administration – Optional (Main Examination)**

**Paper-I**

**Administrative theory**

**Section-A**

II **Theories of Administration:** Nature and typologies; Scientific Management (Taylor and the Scientific Management Movement), Classical Theory (Fayola, Urwick, Gulick and others), Bureaucratic Theory. (Marxist view, Weber's model and its critique, post-Weberian developments.) Ideas of Mary Parker Follett and (C.I. Barnard)
Human Relations School (Elton Mayo and others). Behavioral Approach to Organizational Analysis. Participative Management; (McGregor, Likert and others). The Systems Approach; Open and closed systems.

III Structure of public organizations: Typologies of Political Executive and their functions. Forms of public organizations: Ministries and Departments: Corporations; Companies, Boards and Commissions; Ad hoc and Advisory bodies. Headquarters and field relationships.

IV Administrative Behavior: Decision making with special reference to Herbert Simon, Theories of Leadership, Communication, Morale, Motivation (Maslow and Herzberg.)

Section-B

VIII Comparative Public Administration: Meaning, nature and scope. Models of Comparative Public Administration: Bureaucratic and ecological.

IX Development Administration: Origin and purpose, Rigg's Prismatic-Sala Model; Bureaucracy and Development; Changing profile of Development Administration; new directions in people's self-development and empowerment.

XI Personnel Administration: Objectives of Personnel Administration. Importance of human resource development. Recruitment, training, career development, position classification, discipline, Performance Appraisal, Promotion, Pay and Service Conditions; employer- employee relations, grievance redressal mechanism integrity and code of conduct.

Paper-II

Indian Administration

Section-A

1. Evolution of Indian Administration Kautilya, Mughal period, British legacy.

3. Union Government and Administration President Prime Minister, Council of Ministers, Cabinet committees, Cabinet Secretariat, Prime Minister's Office, Central Secretariat, Ministries and Departments, Advisory Bodies, Boards and Commissions, Field Organizations.
4. **State Government and Administration**—Governor, Chief Minister, Council of Ministers, Chief Secretary, State Secretariat Directorates.

5. **District Administration** Changing role of the District Collector: Law and Order and Development Management. Relationship with functional departments. District administration and the Panchayati Raj institutions. Role and functions of the Sub-Divisional Officer.

7. **Public Sector**: Forms of public undertakings. Their contribution to the economy; problems of autonomy and accountability. Changing role of the Public Sector in the context of liberalization.

Section-B

12. **Administration of Law and Order**: Role of Central and State Agencies in maintenance of law and order. Criminalization of politics and administration.

**Sociology – Optional (Main Examination)**

**Paper-I**

**General Sociology/Foundations of Sociology/Fundamentals of Sociology**

1. **Sociology-The Discipline**:
   Sociology as a science and as an interpretative discipline; impact of industrial and French Revolution on the emergence of sociology; sociology and its relationship with history, economics, political science, psychology and anthropology.

2. **Scientific Study of Social Phenomena**: Problem of objectivity and value neutrality; issue of measurement in social science; elements of scientific method-concepts,
theory and fact, hypothesis; research designs-descriptive, exploratory and experimental

3. Techniques of data collection and analysis:
Participant and quasi-participant observation; interview, questionnaire and schedule case study, sampling-size, reliability and validity, scaling techniques-social distance and Likert scale.

4. Pioneering contributions to Sociology:
   a) Karl Marx: Historical materialism, mode of production, alienation and class struggle.
   b) Emile Durkheim: Division of labor, social fact, religion and society.
   c) Max Weber: Social action, ideal types, authority, bureaucracy, protestant ethic and the spirit of capitalism.
   d) Talcott Parsons: Social system, pattern variables.
   e) Robert K. Merton: Latent and manifest functions, anomie, conformity and deviance, reference groups.

5. Marriage and Family:
Types and forms of marriage; family-structure and function; personality and socialization; Social control; family, lineage, descent and property; changing structure of family marriage and sex roles in modern society; divorce and its implications; gender issues; role conflicts.

6. Social Stratification:
Concepts-hierarchy, inequality and stratification; theories of stratification-Marx, Davis and Moore and Melvin Tumin’s critique; forms and functions; class-different conceptions of class; class-in-itself and class-for-itself; caste and class; caste as a class.

7. Social Mobility:
Types of mobility-open and closed models; intra-and inter-generational mobility; vertical and horizontal mobility; social mobility and social change.

8. Economic System:
Sociological dimensions of economic life; the impact of economic processes on the larger society; social aspects of division of labor and types of exchange; features of pre-industrial and industrial economic system; industrialization and social change; social determinants of economic development.

9. Political System:
The nature of power-personal power, community power, power of the elite, class power, organizational power, power of the un-organized masses; authority and legitimacy; pressure groups and political parties; voting behavior; modes of political participation-democratic and authoritarian forms.

10. Educational System:
Education and Culture; equality of educational opportunity; social aspects of mass education; problems of universalization of primary education; role of community and state intervention in education; education as an instrument of social control and social change; education and modernization.

11. Religion:
Origins of religious beliefs in pre-modern societies; the sacred and the profane; social functions and dysfunctions of religion; monistic and pluralistic religion; organized and unorganized religions; Semitism and anti-Semitism; religion, sect and cults; magic, religion and science.

12. Science & Technology:
Ethos of science; social responsibility of science; social control of science; social consequences of science and technology; technology and social change.

13. Social Movements:
Concepts of social movements; genesis of social movements; ideology and social movement; social movement and social change; types of social movements.

14. Social change and Development:
Continuity and change as fact and as value; theories of social change-Marx, Parsons and Sorokin; directed social change; social policy and social development.

Paper-II
Study of Indian Society

1. Historical Moorings of the Indian Society:
Traditional Hindu social organization; socio-cultural dynamics through the ages; impact of Buddhism, Islam, and the West, factors in continuity and change.

2. Caste System:
Origin of the caste system; cultural and structural views about caste; mobility in caste; caste among Muslims and Christians; change and persistence of caste in modern India; issues of equality and social justice; views of Gandhi and Ambedkar on caste; caste on and Indian polity; Backward Classes Movement; Mandal Commission Report and issues of social backwardness and social justice; emergence of Dalit consciousness.

3. Class Structure:
Class structure in India, agrarian and industrial class structure; emergence of middle class; emergence of classes among tribes; elite formation in India.

4. Marriage, Family and Kinship:
Marriage among different ethnic groups, its changing trends and its future; family-its structural and functional aspects-its changing forms; regional variations in kinship systems and its socio-cultural correlates; impact of legislation and socio-economic change on marriage and family; generation gap.

5. Agrarian Social Structure:
Peasant society and agrarian systems; land tenure systems-historical perspectives, social consequences of land reforms and green revolution; feudalism-semi-feudalism debates; emerging agrarian class structure; agrarian unrest.

6. Industry and Society:
Path of industrialization, occupational diversification, trade unions and human relations; market economy and its social consequences; economic reforms liberalization, privatization and globalization.

7. Political Processes:
Working of the democratic political system in a traditional society; political parties and their social base; social structural origins of political elites and their orientations; regionalism, pluralism and national unity; decentralization of power; panchayati raj and nagarpalikas and 73rd and 74th constitutional amendments.

8. Education:
Directive Principles of State Policy and primary education; education; educational inequality and change; education and social mobility; the role of community and state intervention in education; universalization of primary education; Total Literacy Campaigns; educational problems of disadvantaged groups.

9. Religion and Society:
Size, growth and regional distribution of different religious groups; educational levels of different groups; problems of religious minorities; communal tensions; secularism; conversions; religious fundamentalism.
10. Tribal Societies:
Distinctive features of tribal communities and their geographical spread; problems of tribal communities-land alienation, poverty, indebtedness, health and nutrition, education; tribal development efforts after independence; tribal policy-isolation, assimilation and integration; issues of tribal identity.

11. Population Dynamics:
Population size, growth, composition and distribution; components of population growth; birth rate, death rate and migration; determinants and consequences of population growth; issues of age at marriage, sex ratio, infant mortality rate; population policy and family welfare programmes.

12. Dimensions of Development:
Strategy and ideology of planning; poverty, indebtedness and bonded labor; strategies of rural development-poverty alleviation programmes; environment, housing, slums, and unemployment; programmes for urban development.

13. Social Change:
Endogenous and exogenous sources of change and resistance to change; processes of change-sanskritisation and modernization; agents of change-mass media, education and communication; problems of change and modernization; structural contradictions and breakdowns.

14. Social Movements:
Peasant movements-Kisan Sabha, Telengana, Naxalbari.
Backward Castes Movement: Self-respect Movement, backward castes mobilisation in North India.

15. Women and Society:
Demographic profile of women; special problems-dowry, atrocities, discrimination; existing programmes for women and their impact. Situational analysis of children; child welfare programmes.

16. Social Problems:
Prostitution, AIDS, alcoholism, drug addiction, corruption.

Statistics – Optional (Main Examination)

Paper-I

Probability:
Sample space and events, probability measure and probability space, random variable as a measurable function, distribution function of a random variable, discrete and continuous-type random variable probability mass function, probability density function, vector-valued random variable, marginal and conditional distributions, stochastic independence of events and of random variables, expectation and moments of a random variable, conditional expectation, convergence of a sequence of random variable in distribution, in probability, in p-th mean and almost everywhere, their criteria and inter-relations, Borel-Cantelli lemma, Chebyshev’s and Khinchine’s weak laws of large numbers, strong law of large numbers and kolmogorov’s theorems, Glivenko-Cantelli theorem, probability generating function, characteristic function, inversion theorem, Laplace transform, related uniqueness and continuity theorems,
determination of distribution by its moments. Linderberg and Levy forms of central limit theorem, standard discrete and continuous probability distributions, their interrelations and limiting cases, simple properties of finite Markov chains.

**Statistical Inference**
Consistency, unbiasedness, efficiency, sufficiency, minimal sufficiency, completeness, ancillary statistic, factorization theorem, exponential family of distribution and its properties, uniformly minimum variance unbiased (UMVU) estimation, Rao-Blackwell and Lehmann-Scheffe theorems, Cramer-Rao inequality for single and several-parameter family of distributions, minimum variance bound estimator and its properties, modifications and extensions of Cramer-Rao inequality, Chapman-Robbins inequality, Bhattacharyya’s bounds, estimation by methods of moments, maximum likelihood, least squares, minimum chi-square and modified minimum chi-square, properties of maximum likelihood and other estimators, idea of asymptotic efficiency, idea of prior and posterior distributions, Bayes estimators.

Non-randomised and randomised tests, critical function, MP tests, Neyman-Pearson lemma, UMP tests, monotone likelihood ratio, generalised Neyman-Pearson lemma, similar and unbiased tests, UMPU tests for single and several-parameter families of distributions, likelihood rotates and its large sample properties, chi-square goodness of fit test and its asymptotic distribution.

Confidence bounds and its relation with tests, uniformly most accurate (UMA) and UMA unbiased confidence bounds.

Kolmogorov’s test for goodness of fit and its consistency, sign test and its optimality.

Wilcoxon signed-ranks test and its consistency, Kolmogorov-Smirnov two-sample test, run test, Wilcoxon-Mann-Whitney test and median test, their consistency and asymptotic normality.

Wald’s SPRT and its properties, OC and ASN functions, Wald’s fundamental identity, sequential estimation.

**Linear Inference and Multivariate Analysis**
Linear statistical models’, theory of least squares and analysis of variance, Gauss-Markoff theory, normal equations, least squares estimates and their precision, test of significance and interval estimates based on least squares theory in one-way, two-way and three-way classified data, regression analysis, linear regression, curvilinear regression and orthogonal polynomials, multiple regression, multiple and partial correlations, regression diagnostics and sensitivity analysis, calibration problems, estimation of variance and covariance components, MINQUE theory, multivariate normal distribution, Mahalanobis’ D2 and Hotelling’s T2 statistics and their applications and properties, discriminant analysis, canonical correlations, one-way MANOVA, principal component analysis, elements of factor analysis.

**Sampling Theory and Design of Experiments**
An outline of fixed-population and super-population approaches, distinctive features of finite population sampling, probability sampling designs, simple random sampling with and without replacement, stratified random sampling, systematic sampling and its efficacy for structural populations, cluster sampling, two-stage and multi-stage sampling, ratio and regression, methods of estimation involving one or more auxiliary variables, two-phase sampling, probability proportional to size sampling with and without replacement, the Hansen-Hurwitz and the Horvitz-Thompson estimators, non-negative variance estimation with reference to the Horvitz-Thompson estimator, non-sampling errors, Warner’s randomized response technique for sensitive characteristics.
Fixed effects model (two-way classification) random and mixed effects models (two-way classification per cell), CRD, RBD, LSD and their analyses, incomplete block designs, concepts of orthogonality and balance, BIBD, missing plot technique, factorial designs: 2^n, 32 and 33, confounding in factorial experiments, split-plot and simple lattice designs.

**Paper-II**

I. **Industrial Statistics**

Process and product control, general theory of control charts, different types of control charts for variables and attributes, X, R, s, p, np and c charts, cumulative sum chart, V-mask, single, double, multiple and sequential sampling plans for attributes, OC, ASN, AOQ and ATI curves, concepts of producer’s and consumer’s risks, AQL, LTPD and AOQL, sampling plans for variables, use of Dodge-Romig and Military Standard tables.

Concepts of reliability, maintainability and availability, reliability of series and parallel systems and other simple configurations, renewal density and renewal function, survival models (exponential), Weibull, lognormal, Rayleigh, and bath-tub), different types of redundancy and use of redundancy in reliability improvement, Problems in life-testing, censored and truncated experiments for exponential models.

II. **Optimization Techniques**

Different, types of models in Operational Research, their construction and general methods of solution, simulation and Monte-Carlo methods, the structure and formulation of linear programming (LP) problem, simple LP model and its graphical solution, the simplex procedure, the two-phase method and the M-technique with artificial variables, the duality theory of LP and its economic interpretation, sensitivity analysis, transportation and assignment problems, rectangular games, two-person zero-sum games, methods of solution (graphical and algebraic).

Replacement of failing or deteriorating items, group and individual replacement policies, concept of scientific inventory management and analytical structure of inventory problems, simple models with deterministic and stochastic demand with and without lead time, storage models with particular reference to dam type.

Homogeneous discrete-time Markov chains, transition probability matrix, classification of states and ergodic theorems, homogeneous continuous-time Markov chains, Poisson process, elements of queuing theory, M/M/1, M/M/K, G/M/1 and M/G/1 queues.

Solution of statistical problems on computers using well known statistical software packages like SPSS.

III. **Quantitative Economics and Official Statistics**

Determination of trend, seasonal and cyclical components, Box-Jenkins method, tests for stationery of series, ARIMA models and determination of orders of autoregressive and moving average components, forecasting.

Commonly used index numbers-Laspeyre’s, Paashe’s and Fisher’s ideal index numbers, chain-base index number uses and limitations of index numbers, index number of wholesale prices, consumer price index number, index numbers of agricultural and industrial production, test for index numbers like proportionality test, time-reversal test, factor-reversal test, circular test and dimensional invariance test.

General linear model, ordinary least squares and generalized least squares methods of estimation, problem of multicollinearity, consequences and solutions of multicollinearity, autocorrelation and its consequences, heteroscedasticity of disturbances and its testing, test for independent of disturbances, Zellner’s seemingly unrelated regression equation model and its estimation, concept of structure and
model for simultaneous equations, problem of identification-rank and order conditions of identifiability, two-stage least squares method of estimation. Present official statistical system in India relating to population, agriculture, industrial production, trade and prices, methods of collection of official statistics, their reliability and limitation and the principal publications containing such statistics, various official agencies responsible for data collection and their main functions.

IV. Demography and Psychometry

Demographic data from census, registration, NSS and other surveys, and their limitation and uses, definition, construction and uses of vital rates and ratios, measures of fertility, reproduction rates, morbidity rate, standardized death rate, complete and abridged life tables, construction of life tables from vital statistics and census returns, uses of life tables, logistic and other population growth curves, fitting a logistic curve, population projection, stable population quasi-stable population techniques in estimation of demographic parameters, morbidity and its measurement, standard classification by cause of death, health surveys and use of hospital statistics. Methods of standardization of scales and tests, Z-scores, standard scores, T-scores, percentile scores, intelligence quotient and its measurement and uses, validity of test scores and its determination, use of factor analysis and path analysis in psychometry.

Zoology – Optional (Main Examination)

Paper-1
Section-A

1. Non-chordata and chordata:
   (a) Classification and relationship of various phyla upto sub-classes; Acoelomata and Coelomata; Protostomes and Deuterostomes, Bilateralia and Radiata; Status of Protista, Parazoa, Onychophora and Hemichordata; Symmetry.
   (b) Protozoa: Locomotion, nutrition, reproduction; evolution of sex; General features and life history of Paramaecium, Monocystis, Plasmodium, and Leishmania.
   (c) Porifera: Skeleton, canal system and reproduction.
   (d) Coelenterata: Polymorphism, defensive structures and their mechanism; coral reefs and their formation; metagenesis; general features and life history of Obelia and Aurelia.
   (e) Platyhelminthes: Parasitic adaptation; general features and life history of Fasciola and Taenia and their relation to man.
   (f) Nematelminthes: General features, life history and parasitic adaptation of Ascaris; nemathelminths in relation to man.
   (g) Annelida: Coelom and metamerism; modes of life in polychaetes; general features and life history of nereis (Neanthes), earthworm (Pheretima) and leach (Hirudinaria).
   (h) Arthropoda: Larval forms and parasitism in Crustacea; vision and respiration in arthropods (prawn, cockroach and scorpion); modification of mouth parts in insects (cockroach, mosquito, housefly, honey bee and butterfly); metamorphosis in insects and its hormonal regulation; social organization in insects (termites and honey bees).
   (i) Mollusca: Feeding, respiration, locomotion, shell diversity; general features and life history of Lamellidens, Pila and Sepia, torsion and detorsion in gastropods.
   (j) Echinodermata: Feeding, respiration, locomotion larval forms; general features and life history of Asterias.
1. **Ecology** :
   (a) Biosphere: Biogeochemical cycles, green-houses effect, ozone layer and its impact; ecological succession, biomes and ecotones.
   (b) Population, characteristics, population dynamics, population stabilization.
   (c) Conservation of natural resources - mineral mining, fisheries, aquaculture; forestry; grassland; wildlife (Project Tiger); sustainable production in agriculture-integrated pest management.
   (d) Environmental biodegradation; pollution and its impact on biosphere and its prevention.

2. **Ethology** :
   (a) Behaviour: Sensory filtering, responsiveness, sign stimuli, learning, instinct, habituation, conditioning, imprinting.
   (b) Role of hormones in drive; role of pheromones in alarm spreading; crypsis, predator detection, predator tactics, social behaviour in insects and primates; courtship (Drosophila, 3-spine stickleback and birds).
   (c) Orientation, navigation, homing; biological rhythms; biological clock, tidal, seasonal and circadian rhythms.
   (d) Methods of studying animal behaviour.

3. **Economic Zoology** :
   (a) Apiculture, sericulture, lac culture, carp culture, pearl culture, prawn culture.
   (b) Major infectious and communicable diseases (small pox, plague, malaria, tuberculosis, cholera and AIDS) their vectors, pathogens and prevention.
   (c) Cattle and livestock diseases, their pathogens (helminths) and vectors (ticks, mites, Tabanus, Stomoxys).
   (d) Pests of sugar cane (Pyrilla perpusiella), oil seed (Achaea janata) and rice (Sitophilus oryzae).

4. **Biostatistics** :
   Designing of experiments; null hypothesis; correlation, regression, distribution and measure of central tendency, chi square, student t-test, F-test (one-way & two-way F-test).

5. **Instrumental methods** :
(a) Spectrophotometry, flame photometry, Geiger-Muller counter, scintillation counting.
(b) Electron microscopy (TEM, SEM).

Paper-II
Section-A

I. Cell Biology:
(a) Structure and function of cell and its organelles (nucleus, plasma membrane, mitochondria, Golgi bodies, endoplasmic reticulum, ribosomes and lysosomes), cell division (mitosis and meiosis), mitotic spindle and mitotic apparatus, chromosome movement.
(b) Watson-Crick model of DNA, replication of DNA, protein synthesis, transcription and transcription factors.

II. Genetics
a) Gene structure and functions; genetic code.
(b) Sex chromosomes and sex determination in Drosophila, nematodes and man.
(c) Mendel's laws of inheritance, recombination, linkage, linkage-maps, multiple alleles, cistron concept; genetics of blood groups.
(d) Mutations and mutagenesis: radiation and chemical.
(e) Cloning technology, plasmids and cosmids as vectors, transgenics, transposons, DNA sequence cloning and whole animal cloning (Principles and methodology).
(f) Regulation and gene expression in pro-and eu-karyotes.
(g) Signal transduction; pedigree-analysis; congenital diseases in man.
(h) Human genome mapping; DNA finger-printing.

III. Evolution
(a) Origin of life
(b) Natural selection, role of mutation in evolution, mimicry, variation, isolation, speciation.
(c) Fossils and fossilization; evolution of horse, elephant and man.
(d) Hardy-Weinberg Law, causes of change in gene frequency.
(e) Continental drift and distribution of animals.

IV. Systematics
(a) Zoological nomenclature; international code; cladistics.

Section-B

I. Biochemistry
(a) Structure and role of carbohydrates, fats, lipids, proteins, aminoacids, nucleic acids; saturated and unsaturated fattyacids, cholesterol.
(b) Glycolysis and Krebs cycle, oxidation and reduction, oxidative phosphorylation; energy conservation and release, ATP, cyclic AMP-its structure and role.
(c) Hormone classification (steroid and peptide hormones), biosynthesis and function.
(d) Enzymes: types and mechanisms of action; immunoglobulin and immunity; vitamins and co-enzymes.
(e) Bioenergetics.

II. Physiology (with special reference to mammals)
(a) Composition and constituents of blood; blood groups and Rh factor in man; coagulation, factors and mechanism of coagulation; acid-base balance, thermo regulation.
(b) Oxygen and carbon dioxide transport; haemoglobin: constituents and role in regulation.
(c) Nutritive requirements; role of salivary glands, liver, pancreas and intestinal glands in digestion and absorption.
(d) Excretory products; nephron and regulation of urine formation; osmoregulation.
(e) Types of muscles, mechanism of contraction of skeletal muscles.
(f) Neuron, nerve impulse—its conduction and synaptic transmission; neurotransmitters.
(g) Vision, hearing and olfaction in man.
(h) Mechanism of hormone action.
(i) Physiology of reproduction, role of hormones and pheromones.

III. Developmental Biology
(a) Differentiation from gamete to neurula stage; dedifferentiation; metaplasia, induction, morphogenesis and morphogen; fate maps of gastrulae in frog and chick; organogenesis of eye and heart, placentation in mammals.
(b) Role of cytoplasm in and genetic control of development; cell lineage; causation of metamorphosis in frog and insects; paedogenesis and neoteny; growth, degrowth and cell death; ageing; blastogenesis; regeneration; teratogenesis; neoplasia.
(c) Invasiveness of placenta; in vitro fertilization; embryo transfer, cloning.
(d) Baer's law; evo-devo concept.
